permeate the global financial services industry Manual data entry decades old technological infrastructure inadequate training and systems that can't interact with one another are just a few of the problems that face post trade processing the machinery behind financial markets Unfortunately years of neglect by regulators and financial institutions themselves has left this infrastructure needlessly complex astoundingly inefficient frequently inaccurate and woefully inadequate for modern financial markets The problems are easy to see but difficult to admit For financial institutions the current system costs billions of dollars each year in labor systems maintenance and lost funds For regulators the current system precludes the ability to track systemic risk It also artificially inflates the stability of the global financial system For lawyers and prosecutors the current system allows ample opportunity for unlawful misconduct such as rogue trading and fraud Andrew DeJoy's Behind the Swap examines the risks involved in post trade processing in swaps and derivative markets and provides solutions to better control those risks While Andrew doesn't claim to have all the answers he does believe there is a better system that is both achievable and necessary
