ACSM's Guide to Exercise and Cancer Survivorship American College of Sports Medicine, Melinda L. Irwin, 2012-02-14

ACSM's Guide to Exercise and Cancer Survivorship presents the science behind the benefits of exercise for cancer survival and survivorship as well as the application of that science to the design or adaptation of exercise programs for cancer patients and survivors. Developed by the American College of Sports Medicine, ACSM this authoritative reference offers the most current information for health and fitness professionals working with survivors of many types of cancers. Dr. Melinda L. Irwin has assembled a team of the most respected experts in the field of exercise and cancer survivorship. With an emphasis on practical application, the text discusses the following:

- Incidence and prevalence of the most common cancers
- Common cancer treatments and side effects
- Benefits of exercise after a diagnosis of cancer
- Exercise testing, prescription, and programming
- Nutrition and weight management
- Counseling for health behavior change
- Injury prevention
- Program administration

This guide presents evidence-based information to assist health, fitness, and medical professionals in using exercise to help cancer survivors with recovery, rehabilitation, and reducing the risk of recurrence. Throughout the text, readers will find quick reference Take Home Messages that highlight key information and how it can be applied in practice. Chapters also include reproducible forms and questionnaires to facilitate the implementation of an exercise program with a new client or patient, such as physician's permission forms, medical and cancer treatment history forms, weekly logs of exercise and energy levels, medication listings, and nutrition and goal setting questionnaires. In addition, ACSM's Guide to Exercise and Cancer Survivorship discusses all of the job task analysis points tested in the ACSM ACS Certified Cancer Exercise Trainer (CET) exam, making this the most complete resource available for health and fitness professionals studying to attain CET certification. Each chapter begins with a list of the CET exam points discussed in that chapter. A complete listing is also included in the appendix. As both an essential preparation text for certification and a practical reference, ACSM's Guide to Exercise and Cancer Survivorship will increase health and fitness professionals' knowledge of the benefits of exercise after a cancer diagnosis, as well as the specifics of developing and adapting exercise programs to meet the unique needs of cancer survivors. Evidence has shown that physical activity has numerous health benefits for cancer patients and survivors. More clinicians and oncologists are recommending exercise as a strategy for reducing the side effects of treatment, speeding recovery, and improving overall quality of life. In turn, cancer survivors are seeking health and fitness professionals with knowledge and experience to help them learn how to exercise safely within their capabilities. With ACSM's Guide to Exercise and Cancer Survivorship, health and fitness professionals can provide safe exercise programs to help cancer survivors improve their health, take proactive steps toward preventing recurrences, and enhance their quality of life.

**Exercises for Cancer Survivors** Carol Michaels, Maria Drozda, 2013-11

Some cancer survivors are under the impression that inactivity will decrease fatigue and speed recovery. However, exercising during and after cancer surgery and treatments is helpful for one's

physical and mental well being This book will show you how to improve your recovery Page 4 of cover      **Exercise and Cancer Survivorship** John Saxton,Amanda Daley,2010-01-08 An increasing number of exercise scientists are applying their skills collaboratively with medics and physiotherapists to clinical populations and investigating the effects of exercise in relation to wide ranging clinical pathophysiological and psycho social outcomes The book is aimed at final year Undergraduate and Master s level students of Exercise Science who are interested in working with clinical populations such as cancer patients Many university Sport and Exercise Science courses in the UK and USA now have modules which are focused on exercise for health and cover aspects of exercise science which are appropriate for clinical populations The book would also be a very valuable resource for Undergraduate and Postgraduate Physiotherapy courses and a very useful resource for students of Exercise Science and Physiotherapy as well as practitioners working with cancer patients There are an increasing amount of research opportunities for exercise scientists who are interested in working with clinical populations Furthermore a considerable amount of Government and Charity research funding is being targeted at active lifestyles and this is helping to generate a new culture of collaboration between exercise scientists and medics Hence it is highly likely that an increasing number of students from Sport and Exercise Science courses will pursue careers within the clinical realm in the future Practicing exercise therapists clinical exercise physiologists and physiotherapists would also find lots of useful up to date knowledge to support their evidence based clinical practice This book would also be of interest to informed readers who are themselves undergoing or recovering from cancer treatment      **Exercise Oncology** Kathryn H.
