Experimental Houses Nicolas Pople, 2003 This volume focuses on 42 key contemporary buildings that radically reconfigure the architectural parameters of the house It examines the various ways in which architects have tried to create striking new solutions to familiar problems of form function materials and constraints of space Finnish Summer Houses Jari Jetsonen, Jetsonen Sirkkaliisa, 2008-03-20 Summer is when Finland is at its spellbinding best Emerging from a seven month long winter Finns head outdoors to savor the magical light of the all too brief Scandinavian summer Cityscapes give way to pristine lakes endless forests and idyllic seaside vistas The Finnish summer house offers a unique opportunity for their owners to relax get back intouch with nature and enjoy outdoor activities such as boating swimming and hiking Not surprisingly the architecture of the Finnish summer house occupies an almost mythic even mystical place in the hearts of their inhabitants as well as their architects Indeed many Finnish architects regard the design of their own summer residence or weekend studio as one of their most important works For them the summer house is not only a place to spend leisure time but also a chance to study specific technical details and experiment with new spatial concepts Finnish Summer Houses presents in detail twenty villas cottages and cabins by architects such as Eliel Saarinen Oiva Kallio Alvar Aalto and Juhani Pallasmaa among many others Authors Jari and Sirkkaliisa Jetsonen use contemporary photographs archival images drawings and plans to illustrate the diversity found in the designs of Finnish summer residences From Lars Sonck's Lassus Villa 1895 with its traditional farmhouse elements and Alvar Aalto's Muuratsalo Experimental House 1952/54 to Erkki Kairamo's sparse Villa Aulikki 1995/2003 which seems to grow out of its landscape the works in this book are of a highly personal nature indeed most of the summer houses are still used by the architect or the families of their children The very best examples of these fantastic summer homes are collected here making Finnish Summer Houses an inspiration for anyone dreaming about a summer home of their own

Experimental Archaeology: Making, Understanding, Story-telling Christina Souyoudzoglou-Haywood, Aidan O'Sullivan, 2019-09-30 In this book based on the proceedings of a two day workshop on experimental archaeology at the Irish Institute of Hellenic Studies at Athens in 2017 scholars artists and craftspeople explore how people in the past made things used and discarded them from prehistory to the

Experiments with Life Itself Francisco Gonzalez de Canales, 2013-01-15 Every book relating the history of modern architecture features a large number of pages dedicated to avant garde designs and the formation of the modern movement in the interwar years and a similar number devoted to reconstruction and expansion after the Second World War. Meanwhile as if owing to lack of understanding or convenient silence there is void of dark years of wars, exile and misfortune about which little can be said. However it was in these dark times as in so many other revealing moments in the history of culture that experimental and profoundly invigorating experiences were taking place. Architects and artists voluntarily or forcibly driven to the margins of social importance began to react to a culturally unsustainable situation of which we know very little even today. In *Experiments with Life Itself* Francisco Gonzalez de Canales studies a series of unrelated cases from the late 1930s to the late 1950s that he refers to as domestic self experimentation **Experimental Architecture** Jacobo

Krauel, Amber Ockrassa, 2004 This volume surveys houses that defy expectations and explode the notion of what constitutes experimental in residential architecture. The buildings selected for this book have little in common; they come from different cities across the globe; they represent the work of different architects, often with vastly different outlooks; and they break the mold of what the notion of a house is. The only thing that unifies the twenty-nine projects depicted in this book is that each radically defies convention in some new way. Book jacket **Mainstreaming passive houses** Johan Niskanen, 2018-11-20 The passive house concept has become increasingly popular in the building sector in the last twenty years and is deemed to play an important role in aligning the housing sector with climate and environmental policy objectives. However for such buildings to play this part they need to be more widespread, more common and more accepted by mainstream actors and institutions. The deployment of passive houses involves changes and adaptations in different parts of society. It involves changes in institutional and organisational set-ups and it involves market and regulatory changes. Previous research on passive houses has focused on demonstration projects or has taken for granted that a dissemination will lead to a full-scale transition of the building sector. This puts undue focus on emerging actors and technologies emerging in isolation. This thesis investigates the wider deployment of passive houses with a focus on mainstreaming. This means that focus is on different social arenas where the deployment of passive houses is negotiated between multiple actors. This thesis contributes to a comprehensive picture of how passive house deployment is shaped through a study of attempts to mainstream these buildings in Sweden. It shows how such attempts have been partially successful in specific companies and regions but it also shows how a normalization of these buildings has been limited due to market, regulatory and political developments. *Possivhuskonceptet har blivit allt populärare under de senaste tjugo åren och bedöms spela en viktig roll för att anpassa bostadssektorn till klimat och miljöpolitiska mål. För att sådana byggnader ska kunna göra skillnad måste de dock få en större utbredning och bli accepterade av etablerade aktörer och institutioner. Utbyggnaden av passivhus innebär förändringar och*

anpassningar i olika delar av samhället Dessa innefattar institutionella och organisatoriska förändringar samt marknadsförändringar och en anpassad lagstiftning Tidigare forskning har framförallt studerat demonstrationsprojekt eller har tagit för givet att en spridning av passivhus kommer att leda till en fullskalig omställning av byggsektorn Detta ligger otillräckligt fokus på nya aktörer och tekniker som utvecklats utan bredare socialt rankning Denna avhandling studerar utbyggnaden av passivhus med fokus på mainstreaming Det innebär att fokus ligger på olika sociala arenor där spridningen av passivhus förhandlas mellan nya och etablerade aktörer Avhandlingen bidrar till att presentera en övergripande bild av hur passivhusutbyggnad tar form genom en studie av försök att sprida dessa byggnader i Sverige Avhandlingen visar hur sådana försök delvis har lyckats i specifika förstag och regioner men den visar också hur en normalisering av dessa byggnader har varit begränsad på grund av marknads lagstiftnings och politiska aspekter

Sustainable Houses and Living in the Hot-Humid Climates of Asia Tetsu Kubota, Hom Bahadur Rijal, Hiroto Takaguchi, 2018-06-21 This book provides information on the latest research findings that are useful in the context of designing sustainable houses and living in rapidly growing Asian cities The book is composed of seven parts comprising a total of 50 chapters written by 53 authors from various countries mainly in the Asian region Part I introduces vernacular houses in different Asian countries such as Indonesia Malaysia India Nepal China Thailand and Laos Parts II and III then explore in depth indoor adaptive thermal comfort and occupants adaptive behavior focusing especially on those in hot humid climates Part IV presents detailed survey results on household energy consumption in various tropical Asian cities while Part V analyses the indoor thermal conditions in both traditional houses and modern houses in these countries Several real world sustainable housing practices in Asian cities are reviewed in the following part The final part then discusses the vulnerability of expanding Asian cities to climate change and urban heat island Today approximately 35-40% of global energy is consumed in Asia and this percentage is expected to rise further Energy consumption has increased particularly in the residential sector in line with the rapid rise of the middle class The majority of growing Asian cities are located in hot and humid climate regions and as such there is an urgent need for designers to provide healthy and comfortable indoor environments that do not consume non renewable energy or resources excessively This book is essential reading for anyone with an interest in sustainable house design in the growing cities of Asia
