Handbook Of Normative Data For Neuropsychological Assessment:

Handbook of Normative Data for Neuropsychological Assessment Maura Mitrushina, 2005-02-10 When *Handbook of Normative Data for Neuropsychological Assessment* was published in 1999 it was the first book to provide neuropsychologists with summaries and critiques of normative data for neuropsychological tests The Second Edition which has been revised and updated throughout presents data for 26 commonly used neuropsychological tests including Trailmaking Color Trails Stroop Color Word Interference Auditory Consonant Trigrams Paced Auditory Serial Addition Ruff 2 and 7 Digital Vigilance Boston Naming Verbal Fluency Rey Osterrieth Complex Figure Hooper Visual Fluency Design Fluency Tactual Performance Wechsler Memory Scale Revised Rey Auditory Verbal learning Hopkins Verbal learning WHO UCLA Auditory Verbal Learning Benton Visual Retention Finger Tapping Grip Strength Dynamometer Grooved Pegboard Category and Wisconsin Card Sorting tests In addition California Verbal learning CVLT and CVLT II CERAD List Learning and selective Reminding Tests as well as the newest version of the Wechsler Memory Scale WMS III and WMS IIIA are reviewed Locator tables throughout the book guide the reader to the sets of normative data that are best suited to each individual case depending on the demographic characteristics of the patient and highlight the advantages associated with using data for comparative purposes Those using the book have the option of reading the authors critical review of the normative data for a particular test or simply turning to the appropriate data locator table for a quick reference to the relevant data tables in the Appendices The Second Edition includes reviews of 15 new tests The way the data are presented has been changed to make the book easier to use Meta analytic tables of predicted values for different ages and education where relevant are included for nine tests that have a sufficient number of homogeneous datasets No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests Like the first edition the new edition will be welcomed by practitioners researchers teachers and graduate students as a unique and valuable contribution to the practice of neuropsychology Handbook of Normative Data for Neuropsychological Assessment Maura Mitrushina, Kyle B.

Boone, Jill Razani, Louis F. D'Elia, 2005-02-10 When *Handbook of Normative Data for Neuropsychological Assessment* was published in 1999 it was the first book to provide neuropsychologists with summaries and critiques of normative data for neuropsychological tests The Second Edition which has been revised and updated throughout presents data for 26 commonly used neuropsychological tests including Trailmaking Color Trails Stroop Color Word Interference Auditory Consonant Trigrams Paced Auditory Serial Addition Ruff 2 and 7 Digital Vigilance Boston Naming Verbal Fluency Rey Osterrieth Complex Figure Hooper Visual Fluency Design Fluency Tactual Performance Wechsler Memory Scale Revised Rey Auditory Verbal learning Hopkins Verbal learning WHO UCLA Auditory Verbal Learning Benton Visual Retention Finger Tapping Grip Strength Dynamometer Grooved Pegboard Category and Wisconsin Card Sorting tests In addition California Verbal learning CVLT and CVLT II CERAD List Learning and selective Reminding Tests as well as the newest version of the Wechsler Memory

Scale WMS III and WMS IIIA are reviewed. Locator tables throughout the book guide the reader to the sets of normative data that are best suited to each individual case depending on the demographic characteristics of the patient and highlight the advantages associated with using data for comparative purposes. Those using the book have the option of reading the authors' critical review of the normative data for a particular test or simply turning to the appropriate data locator table for a quick reference to the relevant data tables in the Appendices. The Second Edition includes reviews of 15 new tests. The way the data are presented has been changed to make the book easier to use. Meta-analytic tables of predicted values for different ages and education where relevant are included for nine tests that have a sufficient number of homogeneous datasets. No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests. Like the first edition, the new edition will be welcomed by practitioners, researchers, teachers, and graduate students as a unique and valuable contribution to the practice of neuropsychology.

A Compendium of Neuropsychological Tests Esther Strauss, Elisabeth M. S. Sherman, Otfried Spreen, 2006. This compendium gives an overview of the essential aspects of neuropsychological assessment practice. It is also a source of critical reviews of major neuropsychological assessment tools for the use of the practicing clinician.

Regression-Based Normative Data for Psychological Assessment Wim Van der Elst, 2024-06-03. Over the last 20 years, so-called regression-based normative methods have become increasingly popular. In this approach, regression models for the mean and the residual variance structure are used to derive the normative data. The regression-based normative approach has some important advantages over the traditional normative approach, e.g., it allows for deriving more fine-grained norms and typically requires a substantially smaller sample size to derive accurate norms. This book focuses on regression-based methods to derive normative data. The target audience are psychologists and other researchers in the behavioral sciences who are interested in deriving normative data for psychological tests, e.g., cognitive tests, questionnaires, rating scales, etc. The book provides the essential theoretical background that is needed to understand the methodology, with a strong emphasis on the practical, real-life application of the methodology. To this end, the book is also accompanied by an open-source software package, the R library NormData, that is used to exemplify how normative data can be derived in several case studies.

Handbook of Cross-Cultural Neuropsychology Elaine Fletcher-Janzen, Tony L. Strickland, Cecil R. Reynolds, 2013-11-11. Historically, relatively few investigations in neuropsychology have been sensitive to the analysis of cultural variables. This handbook will assist the neuropsychologist interested in cultural competence and help increase understanding of the link between cultural competence in assessment and intervention and good treatment outcomes. The handbook authors provide an in-depth discussion of the current status of multicultural training in neuropsychology, specific information on diverse groups (age, gender, ethnicity, etc.), assessment instruments, and clinical populations (HIV-infected, seizure disorders, brain injuries, and unique analysis of immigration patterns, forensics, and psychopharmacology). This volume is the first to summarize the cultural data available in neuropsychology. A valuable resource.
