Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **Global Logistics Network Modelling and Policy** Ryuichi

Givoni,D. Banister,2015-08-28 In the last forty years or so the research field exploring the relationship and interaction between transport and development has developed rapidly While sophistication in analysis has increased understanding the effective integration of transport and development often remains poor in theory and in practice with sometimes devastating effects This Handbookprovides a comprehensive analysis of both the current and emerging thinking in this field drawing on multidisciplinary thinking in transport planning transport urban and spatial economics and the wider social sciences With 45 chapters from leading international authors the book is organised around three main themes urban structure and travel transport and spatial impacts wider dimensions in transport and development The chapters each present commentary on key issues within these themes presenting the debate on the impacts of urban structure on travel the impacts of transport investment on development and social and cultural change on travel A multitude of competing inter disciplinary perspectives are considered leaving the reader with an invaluable comprehensive and critical understanding of the field This major Handbookwill serve as a guide for undergraduates and graduate students researchers consultants and also practitioners and policy makers wishing to find a comprehensive and original reference to research on transport and development Contributors J A Annema F Avelino D Banister D Bonilla F Bruinsma C C Cantarelli X Jason Cao C L Chen G Cohen Blankshtain C Curtis G Dane J Dodson A Donald R Dowling M Echenique A El Geneidy R Ewing E Feitelson B Flyvbjerg N Garrick H Geerlings K Geurs M Givoni A R Goetz P Gordon A Grigolon D Halden P Hall I Hamiduddin S Handy P Headicar D A Hensher D Hidalgo R Hickman R Hjorthol M Hillman E Holden T Holvad H Holzapfel M Iacono O B Jensen P Jones J Kenworthy S Kenyon C A Klckner K J Krizek B Lee S Leleur D Levinson T Li Z Li K Linnerud S Marshall W Marshall E Matthies L Meija Dorantes R Meyfahrt P Mokhtarian J C Mu oz P Naess P Newman S Nordbakke S Petheram S Rasouli P Rietveld O Rotem Mindali T Schwanen N Sipe D Stead P Stoker G Stokes H Timmermans B Van Wee R Wilson D Yang *Border Management Modernization* Gerard McLinden,Enrique Fanta,David Widdowson,Tom Doyle,2010-11-30 Border clearance processes by customs and other agencies are among the most important and problematic links in the global supply chain Delays and costs

at the border undermine a country's competitiveness either by taxing imported inputs with deadweight inefficiencies or by adding costs and reducing the competitiveness of exports. This book provides a practical guide to assist policy makers, administrators and border management professionals with information and advice on how to improve border management systems, procedures and institutions. *Advanced Technologies and Methodologies for Risk Management in the Global Transport of Dangerous Goods* C. Bersani, A. Boulmakoul, E. Garbolino, 2008-09-23. In the last few years, logistics has become a strategic factor for development and competition. In fact, research and development activities have traditionally faced the management of supply chain and international transport focussing on two main aspects: speed and efficiency. However, several vulnerabilities have recently been highlighted under a safety and security viewpoint. The weakness of the logistic chains has become more evident with the beginning of the new millennium. Terrorist attacks such as the 11th of September 2001 in the USA have caused the introduction of new rules and procedures which affect the overall logistics, showing the vulnerability of the global economy. So nowadays it would appear anachronistic to carry out an exhaustive research activity on the supply chain with no relation to the various typologies of risk which may affect it. This book aims to effectively represent the current status of research on dangerous goods transport.
