History of Topology I.M. James, 1999-08-24 Topology for many years has been one of the most exciting and influential fields of research in modern mathematics Although its origins may be traced back several hundred years it was Poincaré who gave topology wings in a classic series of articles published around the turn of the century While the earlier history sometimes called the prehistory is also considered this volume is mainly concerned with the more recent history of topology from Poincaré onwards As will be seen from the list of contents the articles cover a wide range of topics Some are more technical than others but the reader without a great deal of technical knowledge should still find most of the articles accessible Some are written by professional historians of mathematics others by historically minded mathematicians who tend to have a different viewpoint

**Proceedings, American Philosophical Society (vol. 117, No. 5, 1973)**,  
Decorated Teichmüller Theory R. C. Penner, 2012 There is an essentially tinker toy model of a trivial bundle over the classical Teichmüller space of a punctured surface called the decorated Teichmüller space where the fiber over a point is the space of all tuples of horocycles one about each puncture This model leads to an extension of the classical mapping class groups called the Ptolemy groupoids and to certain matrix models solving related enumerative problems each of which has proved useful both in mathematics and in theoretical physics These spaces enjoy several related parametrizations leading to a rich and intricate algebro geometric structure tied to the already elaborate combinatorial structure of the tinker toy model Indeed the natural coordinates give the prototypical examples not only of cluster algebras but also of tropicalization This interplay of combinatorics and coordinates admits further manifestations for example in a Lie theory for homeomorphisms of the circle in the geometry underlying the Gauss product in profinite and pronilpotent geometry in the combinatorics underlying conformal and topological quantum field theories and in the geometry and combinatorics of macromolecules This volume gives the story a wider context of these decorated Teichmüller spaces as developed by the author over the last two decades in a series of papers some of them in collaboration Sometimes correcting errors or typos sometimes simplifying proofs and sometimes articulating more general formulations than the original research papers this volume is self contained and requires little formal background Based on a master's course at Aarhus University it gives the first treatment of these works in monographic form

V. Arkhangel'skiĭ, Mikhail Tkachenko, 2008 This book presents a large amount of material both classic and

recent on occasion unpublished about the relations of Algebra and Topology It therefore belongs to the area called Topological Algebra More specifically the objects of the study are subtle and sometimes unexpected phenomena that occur when the continuity meets and properly feeds an algebraic operation Such a combination gives rise to many classic structures including topological groups and semigroups paratopological groups etc Special emphasis is given to tracing the influence of compactness and its generalizations on the properties of an algebraic operation causing on occasion the automatic continuity of the operation The main scope of the book however is outside of the locally compact structures thus distinguishing the monograph from a series of more traditional textbooks The book is unique in that it presents very important material dispersed in hundreds of research articles not covered by any monograph in existence The reader is gently introduced to an amazing world at the interface of Algebra Topology and Set Theory He she will find that the way to the frontier of the knowledge is quite short almost every section of the book contains several intriguing open problems whose solutions can contribute significantly to the area *Mathematical Reviews* ,2001 *Tool for Agroecology Performance Evaluation (TAPE) - Test version* Food and Agriculture Organization of the United Nations,2019-12-19 With the help of multiple partners FAO has developed a global analytical framework for the multidimensional assessment of the performance of agroecology the Tool for Agroecology Performance Evaluation TAPE which aims to Inform policy makers development institutions and other stakeholders by creating references to the multidimensional performance of agroecology and its potential to contribute to multiple SDGs Build knowledge and empower producers through the collective process of producing and sharing data and evidence based on their own practices Support agroecological transition processes at different scales in different locations and different timeframes by proposing a diagnostic of performances over time and by identifying areas of strengths weaknesses and enabling disabling environments This document provides guidance on how to assess agroecology by carrying out a diagnostic of production systems with regard to various dimensions environmental social economic and in a variety of contexts production systems communities territories agro ecological zones etc It explains how the analytical framework proposed by FAO was developed what its underlying principles are and what its methodological components are This document can be used to develop projects aiming to build evidence and collect data about sustainable agriculture and the particular role of agroecological approaches It can also be used to analyze how existing efforts to measure agroecology can contribute to building globally relevant and harmonized evidence **New**
