**Prevention** Kristina Orth-Gom,r,Neil Schneiderman,Kristina Orth-Gomer,2013-05-13 Cardiovascular disease CVD is the number one killer of men and women in industrialized countries In older age groups CVD is also the most important cause for hospitalization and in many countries it is the basis of early retirement from work Thus CVD is associated with enormous costs for care and loss of productivity as well as for disabilities pensions etc All this has motivated clinicians and scientists to

develop and implement new methodologies and technologies to better care for patients who are hospitalized for heart disease. Efforts to improve care in the acute phases of coronary heart disease (CHD) have been successful. During the last decade the immediate mortality risk of a patient admitted to coronary care for a suspected myocardial infarction or other acute coronary syndrome has decreased to less than 10%. Despite these achievements, CVD continues to represent a major threat to the health of middle-aged and elderly men and women. This volume addresses myriad aspects of CHD prevention, including biobehavioral and psychosocial factors, behavioral epidemiology, behavioral intervention models, and policy. The first section of the text provides an introduction to CVD prevention and behavioral medicine. The second section introduces two theoretically different approaches to preventive action: high-risk and population-based strategies. The third section describes and discusses the important questions of how behavioral sciences can be conceptually integrated into traditional medically based preventive efforts. The fourth section presents both population and high-risk behavioral intervention approaches. In summary, this volume examines the social environment and its potentials for preventive actions, reviews the psychosocial and biobehavioral mechanisms involved in these effects, and describes concrete and practical implementations of behavioral medicine knowledge as they have been applied to CHD prevention.
