Experimental Models Of Diabetes:

Experimental Models of Diabetes John H. McNeill, 2018-05-11 An extremely useful text for research Internationally renowned experts describe the models provide data obtained with those models and discuss the relative usefulness of models in relation to the diabetic syndrome in humans The first section examines the most widely used model the streptozotocin STZ rat condensing a massive quantity of literature to present both the general effects of of STZ diabetes and the effects on individual organ systems The second section discusses less well known and more recent diabetic models such as the BB rat the NOD mouse and Zucker and Zucker Diabetic Fatty rat models Genetic models of insulin dependent diabetes mellitus IDDM are examined and compared to chemically induced IDDM models **Animal Models of Diabetes** Eleazar

Shafir, 2007-04-05 As the incidence of diabetes increases worldwide the need for recommendations on how to prevent and treat the condition grows exponentially and so does the need for an authoritative source for information on the appropriate models to study the condition The new edition of *Animal Models of Diabetes* is that source The book presents updated

Studies on Experimental Models Samar Basu, Lars Wiklund, 2011-04-13 There is a widespread consensus that use of antioxidants as a therapeutic approach may counteract free radical mediated pathologies However the role of antioxidants in normal physiology and redox signaling is still in its infancy Since oxidative stress is related to various diseases and pathologies scientists are eager to study the disease in humans but it is not always ethical to study all the aspects of the disease in humans Thus it becomes mandatory to study the disease process and the mechanisms behind it through experimental models which generally involve animals in vitro cell culture studies primates and even humans to a certain extent *Studies on Experimental Models* contains data on the experimental models or review of such models of oxidative stress in various diseases It is structured into six sections which are as follows diabetes cardiovascular neurology ocular diseases toxicology environmental and in vitro tissue culture Each section presents a sketch of models in humans animals and in vitro methods Taken together they comprise a valuable reference for basic and clinical scientists one aimed at contributing to the advancement of oxidative stress research using appropriate animal models **Animal Models in**

Diabetes Research Hans-Georg Joost, Hadi Al-Hasani, Annette Schürmann, 2012 In recent years human studies have made enormous contributions towards an understanding of the genetic basis of diabetes mellitus however most of the experimentation needed for the invention and testing of novel therapeutic approaches cannot be performed in humans Thus there is no alternative to appropriate animal models In *Animal Models in Diabetes Research* expert researchers explore the current status of the most important models and procedures in order to provide a timely resource in experimental diabetology The first half of the volume serves as a comprehensive overview on our current knowledge of the pathogenesis and pathophysiology of diabetes in animal models through a series of reviews in model strains The book then continues with vital established protocols that are employed in the characterization and study of animal models of diabetes As a volume in
