Handwriting Recognition Soft Computing And Probabilistic Approaches:

Handwriting Recognition Zhi-Qiang Liu, Jin-Hai Cai, Richard Buse, 2012-11-07 Over the last few decades research on handwriting recognition has made impressive progress. The research and development on handwritten word recognition are to a large degree motivated by many application areas such as automated postal address and code reading, data acquisition in banks, text voice conversion, security, etc. As the prices of scanners, computers and handwriting input devices are falling steadily, we have seen an increased demand for handwriting recognition systems and software packages. Some commercial handwriting recognition systems are now available in the market. Current commercial systems have an impressive performance in recognizing machine printed characters and neatly written texts. For instance, High Tech Solutions in Israel has developed several products for container ID recognition, car license plate recognition and package label recognition. Xerox in the U.S. has developed TextBridge for converting hardcopy documents into electronic document files. In spite of the impressive progress, there is still a significant performance gap between the human and the machine in recognizing off-line unconstrained handwritten characters and words. The difficulties encountered in recognizing unconstrained handwritings are mainly caused by huge variations in writing styles and the overlapping and the interconnection of neighboring characters. Furthermore, many applications demand very high recognition accuracy and reliability. For example, in the banking sector, although automated teller machines (ATMs) and networked banking systems are now widely available, many transactions are still carried out in the form of cheques.

Type-2 Fuzzy Graphical Models for Pattern Recognition Jia Zeng, Zhi-Qiang Liu, 2014-09-17 This book discusses how to combine type 2 fuzzy sets and graphical models to solve a range of real world pattern recognition problems such as speech recognition, handwritten Chinese character recognition, topic modeling as well as human action recognition. It covers these recent developments while also providing a comprehensive introduction to the fields of type 2 fuzzy sets and graphical models. Though primarily intended for graduate students, researchers and practitioners in fuzzy logic and pattern recognition, the book can also serve as a valuable reference work for researchers without any previous knowledge of these fields. Dr Jia Zeng is a Professor at the School of Computer Science and Technology, Soochow University, China. Dr Zhi Qiang Liu is a Professor at the School of Creative Media, City University of Hong Kong, China.
