

new polymer, or polymers blended with non-polymeric fillers, such as glass or carbon fiber. The reasons for blending polymers include higher performance through synergism, to achieve desired properties, to aid the recycling process, to adjust a composition to customer specifications, and to dilute for reduced cost. This book is broken down into three sections dealing with multicomponent polymers. The first section, "Basic Concepts in Multicomponent Polymer Materials," describes the science of both polymer blends and composites, where polymers are combined with other polymers as well as non-polymeric materials. The physical characteristics of multicomponent systems are detailed, some of which include: blending and grafting, determining domain size and structure, phase transitions, Takayanagi models, miscibility, methods of causing phase separation, and fracture behavior. Section II describes classes of polymer surfaces and interfaces and methods for characterizing the interface and means for strengthening the interface. Also detailed are the surfaces of advanced and composite systems that include filler treatments, carbon fiber, plasma treatments, and carbon black fillers. The third section covers rubber toughening of engineering plastics, such as HIPS, ABS, PVC, PC, HDPE, and epoxies, to name a few. An appendix of polymer abbreviations is also included. The book is well written and is easy to read and contains very useful information in the area of developing engineering polymer blends from either multicomponent polymers and/or non-polymeric fillers.

ELECTRICAL INSULATION IN POWER SYSTEMS

M. I. Qureshi
Marcel Dekker, Inc.
270 Madison Ave.
New York, NY 10016-0602
400 pages - \$145

This book is one of the few recent texts dealing with the broad range of insulation materials used in power sys-

tems, including vacuum, gas, liquid, solid, and composite materials. After a brief introduction to the dielectric properties of materials, there are chapters related to specific types of insulation materials, such as gas dielectrics, air, SF₆, liquid dielectrics, solid dielectrics, vacuum dielectrics, and composite dielectrics. Particular issues related to high voltage cable are discussed in a separate chapter. Testing methods are discussed in the final three chapters on generation and measurement of testing voltages, new diagnostic techniques, such as automated testing, optical probes, and space charge measurement, and insulation test procedures. This book is a good collection in one place of the basic information in this area and should be useful to practicing engineers as well as to students learning about the field.

FOUNDATIONS OF VACUUM SCIENCE AND TECHNOLOGY

Edited by J.M. Lafferty
John Wiley & Sons, Inc.
605 Third Ave.
New York, NY 10158-0012
728 pages - \$150 (hardback)

Numerous analytical material characterization techniques rely on vacuum systems as well as plasma process techniques, laboratory experiments, high energy accelerators, freeze drying of food and drugs, x-ray tubes, and even commercial products, such as vacuum interrupters. Basic knowledge of vacuum techniques is thus a prerequisite to working in the field. This book provides a comprehensive coverage of the entire vacuum field, from the fundamental theory of kinetic gas flow to ultra high vacuum and numerous kinds of vacuum pumps, including "dry" pumps that produce a "clean vacuum" free of hydrocarbons. While all this material is new, the book follows in the tradition set by Saul Dushman's work, *Scientific Foundations of Vacuum Technique*, published in 1949 and revised in 1962. This textbook would be a valuable resource to anyone involved in vacuum technology at any level. Appendices contain useful information on the vapor

pressure of various solid and liquid elements. Sections on calibrating pressure gauges, outgassing rates, and designing high vacuum systems were of particular interest. The table of pressure conversion factors to other units is very useful when dealing with the numerous pressure units. This advanced text could be useful to scientists and engineers working in the area of vacuum technology.
