Seeing the Future with Imaging Science The National Academies Keck Futures Initiatives, 2011-06-17 Imaging science has the power to illuminate regions as remote as distant galaxies and as close to home as our own bodies Many of the disciplines that can benefit from imaging share common technical problems yet researchers often develop ad hoc methods for solving individual tasks without building broader frameworks that could address many scientific problems At the 2010 National Academies Keck Futures Initiative Conference on Imaging Science researchers from academia industry and government formed 14 interdisciplinary teams created to find a common language and structure for developing new technologies processing and recovering images mining imaging data and visualizing it effectively The teams spent nine hours over two days exploring diverse challenges at the interface of science engineering and medicine NAKFI

Seeing the Future with Imaging Science contains the summaries written by each team These summaries describe the problem and outline the approach taken including what research needs to be done to understand the fundamental science behind the challenge the proposed plan for engineering the application the reasoning that went into it and the benefits to society of the problem solution

Mathematics and Computation in Imaging Science and Information Processing Say Song Goh, Amos Ron, Zuowei Shen, 2007 The explosion of data arising from rapid advances in communication sensing and computational power has concentrated research effort on more advanced techniques for the representation processing analysis and interpretation of data sets In view of these exciting developments the program OC Mathematics and Computation in Imaging Science and Information ProcessingOCO was held at the Institute for Mathematical Sciences National University of Singapore from July to December 2003 and in August 2004 to promote and facilitate multidisciplinary research in the area As part of the program a series of tutorial lectures were conducted by international experts on a wide variety of topics in mathematical image signal and information processing This compiled volume contains survey articles by the tutorial speakers all specialists in their respective areas They collectively provide graduate students and researchers new to the field a unique and valuable introduction to a range of important topics at the frontiers of current research
