Immunoassay Brian Law, 2002-09-11 Immunoassay development is a multidisciplinary

activity involving a wide range of skills possessed by few laboratories This presentation of tried and tested methods should enable scientists and researchers in the pharmaceutical and related industries to more rapidly and effectively develop immunoassays upon which their work is becoming heavily dependent Important methods are included for preparing Laptin protein conjugates and raising the necessary antibodies concentrating on polyclonal sera as well as methods for the synthesis of radio and enzyme labelled tracers Particular attention is paid to the requirements of the regulatory authorities such as the FDA Food and Drug Administration with respect to assay validation Further chapters deal with assay development and optimization curve fitting and quality control procedures

Immunoassay Bozzano G Luisa, 2012-12-02 During the last few years immunoassay has gained tremendous popularity in clinical and research laboratories and has been applied to determine hormone enzyme protein drug and infectious agents The aim of this book is to provide clinical laboratory personnel and students with an understanding of the principle of immunoassay and the production of reagents for immunoassay

*Immunodiagnosics* R. Edwards, 1999-11-25 Immunodiagnostic tests are analytical methods that use antibodies as reagents whose results are used to aid diagnosis and are widely used in many scientific disciplines and in many different ways Perhaps the most widespread and obvious use is in clinical applications but immunodiagnostic tests are also used in other fields such as forensic science and environmental and food analysis The different types of test range from simple manual methods to fully automated systems with sophisticated integrated detection Immunodiagnosics A Practical Approach starts off by explaining the principles and development of immunodiagnostic tests specifically the use of radioisotopes as tracers Chapter 2 explains the use of solid phase supports to bind immunoreagents Enzymes are widely used as labels in immunoassays and their use with colourimetric fluorimetric and chemiluminescent detection systems is described The use of enzymes as labels reflects the move away from radioisotopes and one of the most powerful non radioisotopic procedures is the time resolved fluorescence assay Enzymes can also be used as a simple method of obtaining high performance from immunodiagnosics and this application is covered later in the book The next set of techniques to be described are light scattering techniques which can be used in either simple manual assays or in sophisticated automated procedures The penultimate chapter describes the principles of automation of immunodiagnostic tests The last topic to be discussed is that of quality assurance

**Enzyme Immunoassays** S.S. Deshpande, 2012-12-06 This unique reference provides a pragmatic approach to the development of successful commercial immunodiagnostic products based on enzyme immunoassay technology Presenting both the basic and applied principles Enzyme Immunoassays gathers information on all aspects of this process from the initial conceptualization to the introduction of the product to the market
