La Commande Optimale Des Systèmes Dynamiques:

La commande optimale des systèmes dynamiques I Abou, 2004 Commande et optimisation de systèmes dynamiques Frédéric Bonnans, Pierre Rouchon, 2005 **Contribution à la commande optimale des systèmes dynamiques hybrides** Pierre Riedinger, 1999 La notion de système dynamique hybride SDH désigne un système dynamique forme par le couplage et l'interaction de systèmes continus et discrets La richesse de comportements actions continues ponctuelles de décisions fonctions de l'avancement des tâches entreprises et de description attendus des SDH s'accompagne d'un coût les outils méthodes de conception et d'analyse développés pour les systèmes discrets et continus sont caduques ou nécessitent une sérieuse refondation afin d'être adaptés à ce nouveau contexte hybride Cette thèse aborde le problème de la commande optimale des SDH Une extension du principe du maximum PM de Pontryaguine aux SDH par la prise en considération de discontinuités sur l'état ainsi que sur les modèles régissant l'évolution continue du système est le résultat central de ce travail L'application de ce principe sur des problèmes de commande optimale en temps montre comment il est possible de faire la synthèse d'une commande optimale voire sous optimale par l'étude d'un problème tendu obtenu en relaxant les contraintes sur le domaine de commande L'équivalent hybride de la commande optimale par critère quadratique est également dérivé du PM La résolution d'une suite d'équations différentielles de Riccati conduit alors une commande en boucle fermée Des conditions suffisantes sur la stabilité de ces systèmes complètent ces résultats **La commande optimale** Roger Marcelin Faye, Félix Mora-Camino, 2017-08-15 La théorie de la commande optimale qui s'adresse la conduite efficace des systèmes dynamiques a été développée dans la deuxième moitié du XIXe siècle Les domaines d'utilisation avec les systèmes automatisés qui font partie de notre vie quotidienne sont variés : gestion et transport d'énergie électrique systèmes robotisés de production de biens systèmes de surveillance de communication de défense et équipements médicaux Un manuel efficace pour la résolution de tous les problèmes d'optimisation Commande optimale des systèmes dynamiques non linéaires à retards avec contraintes d'inégalités sur l'état et la commande Joao Lauro Dorneles Faco, 1977 **Commande numérique de systèmes dynamiques** Roland Longchamp, 2010-01-01 Commande optimale des systèmes dynamiques hybrides Mohsen Marzougui, 2014-10-13 Dans la littérature de l'automatique deux classes de systèmes dynamiques sont distinguées : continus et discrets L'idée de réunir ces deux classes qui s'est développée à la fin des années 1980 a donné naissance à l'automatique des systèmes dynamiques hybrides Ce besoin se fit sentir car de nombreux systèmes réels connaissent des évolutions à la fois continues et événementielles Avec l'interaction et la relation rigide entre les phénomènes continus et discrets le comportement des systèmes hybrides peut sembler extrêmement complexe et son étude s'avère délicate Il n'existe pas pour l'instant de théorie globale pour l'étude de ces systèmes mais plutôt des approches basées sur l'extension des méthodes classiques issues des systèmes continus ou discrets Ce livre s'intéresse à la résolution des problèmes de commande optimale des systèmes dynamiques hybrides à commutations de modèles via la méthode du calcul des variations

Deux algorithmes d'optimisation basés sur méthode de descente de gradient sont présentés et implémentés pour la minimisation d'un problème de poursuite de trajectoire. Une application numérique est présentée afin de comparer les résultats obtenus.

Mono- and Multivariable Control and Estimation Eric Ostertag, 2011-01-03 This book presents the various design methods of a state feedback control law and of an observer. The considered systems are of continuous time and of discrete time nature monovariable or multivariable the last ones being of main consideration. Three different approaches are described: Linear design methods with an emphasis on decoupling strategies and a general formula for multivariable controller or observer design; Quadratic optimization methods: Linear Quadratic Control LQC, optimal Kalman filtering, Linear Quadratic Gaussian LQG control; Linear matrix inequalities LMIs to solve linear and quadratic problems. The duality between control and observation is taken to advantage and extended up to the mathematical domain. A large number of exercises all given with their detailed solutions mostly obtained with MATLAB reinforce and exemplify the practical orientation of this book. The programs created by the author for their solving are available on the Internet sites of Springer and of MathWorks for downloading. This book is targeted at students of Engineering Schools or Universities at the Master's level at engineers desiring to design and implement innovative control methods and at researchers.

Advances and Applications in Nonlinear Control Systems Sundarapandian Vaidyanathan, Christos Volos, 2016-03-17 The book reports on the latest advances and applications of nonlinear control systems. It consists of 30 contributed chapters by subject experts who are specialized in the various topics addressed in this book. The special chapters have been brought out in the broad areas of nonlinear control systems such as robotics, nonlinear circuits, power systems, memristors, underwater vehicles, chemical processes, observer design, output regulation, backstepping control, sliding mode control, time delayed control, variables structure control, robust adaptive control, fuzzy logic control, chaos, hyperchaos, jerk systems, hyperjerk systems, chaos control, chaos synchronization, etc. Special importance was given to chapters offering practical solutions, modeling and novel control methods for the recent research problems in nonlinear control systems. This book will serve as a reference book for graduate students and researchers with a basic knowledge of electrical and control systems engineering. The resulting design procedures on the nonlinear control systems are emphasized using MATLAB software.
