Foundations Of Pharmacokinetics:

Foundations of Pharmacokinetics Aldo Rescigno, 2003-01-31 This book has its origin in my experience as a teacher of pharmacokinetics in many universities in four different continents It was not my intention to write a popular book what distinguishes this one from many others on the same subject is its large use of algebra and calculus For this I make no apologies in fact a serious study of pharmacokinetics without the help of mathematics is in my opinion impossible The exact definition of many pharmacokinetic quantities even the most common and the correct use of many equations even the most simple requires the constant use of mathematical language On the other hand I have made a considerable effort to use only elementary algebra and elementary calculus as commonly taught in most introductory university courses For the few exceptions when less common mathematical concepts were needed I have supplied the necessary explanations in four appendices The first three chapters are a general introduction to the scientific method Chapters 4 to 12 show different specific methods to deal with pharmacokinetic problems There is considerable overlap among those chapters this is intentional and its purpose is to convince the reader that every problem can be solved in more than one way including ways that were not mentioned in this book and that intelligent readers can find for their own pleasure Chapters 13 to 17 show how different parameters of importance in pharmacokinetics can be exactly defined and measured

Thakur,2012-12-06 The last decade or so has witnessed tremendous progress in methodology in the field of drug development in general and pharmacokinetics in particular Clinical pharmacokinetics is using new tools for probing into the black box once being accessible only partly through experimental techniques and mostly through mathematical and computer means Development of computerized scanning positron emission tomography PET stereoselectivity and other techniques are now enabling investigators to have better pictures of the systems they are studying Mathematical models through computer simulation and statistical estimation mostly due to easy access because of inexpensive yet powerful personal computers are enabling us to investigate ultrastructures and their functional connectivity in more detail As a consequence new hypotheses are being formed and tested in various related fields In clinical pharmacokinetics mostly due to mathematical modeling more accurate interspecies scaling of pharmacokinetic parameters and dosimetry can be done now a days The concept of a human is a bigger rat does not necessarily fly as a consequence Pharmacokinetic concepts are becoming powerful tools in meaningful carcinogenic and toxic risk extrapolation of different chemicals in humans New dose delivery designs are being formulated using pharmacokinetic techniques for different pharmaceutical compounds Investigations continue in the academia research institutions pharmaceutical biotechnological and agricultural industries in developmental and physiological aspects of different chemicals for the benefit of mankind The idea of a school on New Trends in Pharmacokinetics from which the present publication was made possible took shape over almost a year

Pharmacokinetics A. Pecile, 2012-12-06 Pharmacologists can be considered pioneers of the

study of kinetics of materials introduced into biological systems The study of drug kinetics is particularly suited to a formulation of relatively simple models which make possible an interpretation of the time dependent nature of various important phenomena e g distribution by means of diffusion through membranes! The objective of the NATO ASI Course on Pharmacokinetics was that of presenting and discussing the mathematical and statistical approaches currently available or being developed for the description interpretation and prediction of the fate of drugs and tracer substances administered to living beings Different physical methods for measuring drugs and tracer substances were considered but the emphasis was on the interpretation of the results of the measurements in terms of mathematical and statistical models The present book contains all invited lectures given in this Course by outstanding international authorities and specialists from different fields A great effort was made to keep a balance among the mathematical physical biological and clinical aspects of the problems exchange of ideas and experiences between scientists with a physico mathematical background and scientists with a biomedical background was encouraged and all participants were deeply involved in fruitful discussions This unique feature of the Course is also the unique characteristic of this book which is therefore mainly directed to people interested not just in acquiring a working knowledge of the methods but in developing new methods
