Fourth Generation Evaluation:

Fourth Generation Evaluation Egon G. Guba, Yvonna S. Lincoln, 1989 Publisher's description Fourth Generation Evaluation represents a monumental shift in evaluation practice Guba and Lincoln point to the inherent problems faced by previous generations of evaluators politics ethical dilemmas imperfections and gaps inconclusive deductions and lay the blame for failure and nonutilization at the feet of the unquestioned reliance on the scientific positivist paradigm of research Fourth Generation Evaluation a more informed and sophisticated approach moves beyond science to include the myriad human political social cultural and contextual elements that are involved Based upon relativism a unity between knower and known and a subjective epistemology the authors show how fourth generation evaluation unites the evaluator and the stakeholders in an interaction that creates the product of the evaluation Differing from previously existing generations this new approach moves evaluation to a new level whose key dynamic is negotiation The constructivist paradigm is espoused by the authors and shown to offer multiple advantages including empowerment and enfranchisement of stakeholders as well as an action orientation that defines a course to be followed Not merely a treatise on evaluation theory Guba and Lincoln also comprehensively describe the differences between the positivist and constructivist paradigms of research and provide a practical plan of the steps and processes in conducting a fourth generation evaluation

Working with Assumptions in International Development Program Evaluation Apollo M. Nkwake, 2012-08-30 A major reason complex programs are so difficult to evaluate is that the assumptions that inspire them are poorly articulated Stakeholders of such programs are often unclear about how the change process will unfold Thus it is so difficult to reasonably anticipate the early and midterm changes that need to happen in order for a longer term goal to be reached The lack of clarity about the mini steps that must be taken to reach a long term outcome not only makes the task of evaluating a complex initiative challenging but reduces the likelihood that all of the important factors related to the long term goal will be addressed Most of the resources that have attempted to address this dilemma have been popularized as theory of change or sometimes program theory approaches Although these approaches emphasize and elaborate the sequence of changes mini steps that lead to the long term goal of interest and the connections between program activities and outcomes that occur at each step of the way they do not do enough to clarify how program managers or evaluators should deal with assumptions Assumptions the glue that holds all the pieces together remain abstract and far from applicable In this book the author tackles this important assumptions theme head on covering a breadth of ground from the epistemology of development assumptions to the art of making logical assumptions as well as recognizing explicit and testing assumptions within an elaborate program theory from program design implementation monitoring and evaluation *Social Work Evaluation, Second Edition* James R.
