Fragile Dominion Complexity And The Commons:

Fragile Dominion Simon Levin, 1999-06-03 How the science of complexity can help save the natural world from collapse

Fragile Dominion: Complexity and the Commons Simon A Levin, 2000 The Drama of the Commons National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, 2002-02-15 The tragedy of the commons is a central concept in human ecology and the study of the environment It has had tremendous value for stimulating research but it only describes the reality of human environment interactions in special situations Research over the past thirty years has helped clarify how human motivations rules governing access to resources the structure of social organizations and the resource systems themselves interact to determine whether or not the many dramas of the commons end happily In this book leaders in the field review the evidence from several disciplines and many lines of research and present a state of the art assessment They summarize lessons learned and identify the major challenges facing any system of governance for resource management They also highlight the major challenges for the next decade making knowledge development more systematic understanding institutions dynamically considering a broader range of resources such as global and technological commons and taking into account the effects of social and historical context This book will be a valuable and accessible introduction to the field for students and a resource for advanced researchers

Advanced Introduction to Resilience Fikret Berkes, 2023-02-14 Providing a concise overview of resilience in the context of unprecedented global environmental change this Advanced Introduction addresses the intertwined systems of people and nature It explores ecological resilience incorporating social science approaches and concepts and identifies and discusses innovative ways of planning for an increasingly unpredictable future **Managed Annihilation** Dean

Bavington, 2011-01-01 The Newfoundland and Labrador cod fishery was once the most successful commercial fishery in the world When it collapsed in 1992 many pointed to failures in management such as uncontrolled harvesting as likely culprits Managed Annihilation makes the case that the idea of natural resource management itself was the problem The collapse occurred when the fisheries were state managed and still two decades later there is no recovery in sight Although the collapse raised doubts among policy makers about their ability to understand and control nature their ultimate goal of control through management has not wavered and has been transferred from wild fish to fishermen and farmed cod

Environment and Development Economics Scott Barrett, Karl-Göran Mäler, Eric S. Maskin, 2014-04-10 This book honours Partha Dasgupta and the field he helped establish environment and development economics It concerns the relationship between social systems to include families local communities national economies and the world as a whole and natural systems critical ecosystems forests water resources mineral deposits pollution fisheries and the Earth's climate Above all it concerns the poverty environment nexus the complex pathways by which people become or remain poor and resources become or remain overexploited With contributions by some of the world's leading economists including five

recipients of the Nobel Prize in Economics in addition to scholars based in developing countries this volume offers a unique perspective on the environmental issues that matter most to developing countries **Beyond Collapse** Ronald K. Faulseit, 2016 This book interprets how ancient civilizations responded to various stresses including environmental change warfare and the fragmentation of political institutions It focuses on what happened during and after the decline of once powerful regimes and posits that they experienced social resilience and transformation instead of collapse

Community-based Collaboration E. Franklin Dukes, Karen Firehock, Juliana Birkhoff, 2011 The debate over the value of community based environmental collaboration is one that dominates current discussions of the management of public lands and other resources In Community Based Collaboration Bridging Socio Ecological Research and Practice the volume s contributors offer an in depth interdisciplinary exploration of what attracts people to this collaborative mode The authors address the new institutional roles adopted by community based collaborators and their interaction with existing governance institutions in order to achieve more holistic solutions to complex environmental challenges Contributors Heidi L Ballard University of California Davis Juliana E Birkhoff RESOLVE Charles Curtin Antioch University Cecilia Danks University of Vermont E Franklin Dukes University of Virginia and George Mason University Mar a Fernandez Gim nez Colorado State University Karen E Firehock University of Virginia Melanie Hughes McDermott Rutgers University William D Leach California State University Sacramento Margaret Ann Moote private consultant Susan L Senecah State University of New York College of Environmental Science and Forestry Gregg B Walker Oregon State University Governing for transformation towards sustainable small-scale fisheries Food and Agriculture Organization of the United Nations, Berkes, F. (ed.), Franz, N. (ed.), 2025-02-21 This volume provides a human centered perspective building on the expanding horizon from biological and economic management to interdisciplinary and transdisciplinary aquatic resources governance It was prepared in celebration of the tenth anniversary of the Voluntary Guidelines for Securing Sustainable Small Scale Fisheries in the Context of Food Security and Poverty Eradication SSF Guidelines It also provides an update of Berkes book Coasts for People Interdisciplinary Approaches to Coastal and Marine Resource Management Routledge 2015 The original chapters of the book served as the first draft of seven of the chapters all of them rewritten with multiple authors total of 20 co authors and with an explicit focus on small scale fisheries through the lens of the SSF Guidelines Over the years aquatic resources governance has evolved For example the term resource which carried a sense of free goods and commodification of nature shifted in meaning to include biodiversity and ecosystem services The term management changed to include participation complexity and uncertainty The volume focuses on several subject areas as the key elements of an interdisciplinary science of aquatic governance These include holism and ecosystems view Chapter 2 coupled humans and environment systems Chapter 3 fishers knowledge Chapter 4 commons dilemmas Chapter 5 co management Chapter 6 livelihoods and sustainability Chapter 7 fishery systems resilience Chapter 8 and ecosystem and human rights based management Chapter 9 These

interdisciplinary social science oriented approaches have shaped recent thinking about small scale fisheries helping empower fishers and fishworkers towards a more inclusive equitable sustainable and resilient subsector They also help meet Sustainable Development Goals particularly SDG1 No Poverty and SDG2 Zero Hunger consistent with the emphasis of SSF Guidelines on poverty eradication and food security The intended audience for the volume is broad based and includes fisheries and aquatic management practitioners and policymakers scientists and educators It is an invitation to a new generation of resource managers to be aware of how approaches and concepts have evolved over time to embrace the challenge of interdisciplinarity and complexity to advance the transformation towards sustainable small scale fisheries

How Sonata Forms Yoel Greenberg, 2022 How Sonata Forms proposes a new bottom up conceptualization of the history of the sonata as an aggregation of distinct elements found throughout the eighteenth century **Integrating Emerging Technologies into Marine Megafauna Conservation Management** Peter H. Dutton, Mark Meekan, Lars Bejder, Lisa Marie Komoroske, 2020-01-16 *The Economics of Non-Convex Ecosystems* Partha Dasgupta, Karl-Göran Mäler, 2006-04-11 Economists often assume that ecosystem and population dynamics are subject to convex even linear processes But research by ecosystem and population ecologists suggests that such processes are very often non convex for example a possible flip of the Gulf Stream due to fresh water intrusion from melting glaciers This has dramatic implications for environmental and resource economics since mistakes in management could prove more costly than imagined **Water Governance in the Face of Global Change** Claudia Pahl-Wostl, 2015-09-04 This book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of real water governance systems while also introducing different approaches to comparative analysis Applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled Specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning The sustainable management of global water resources is one of the most pressing environmental challenges of the 21st century Many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself At the same time our understanding of complex water governance systems largely remains limited and fragmented The book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike **Closed Ecological Systems** Fouad Sabry, 2021-10-10 What Is Closed Ecological Systems A closed ecological system is an ecosystem that provides for the maintenance of life through complete reutilization of available material in particular by means of cycles wherein exhaled carbon dioxide fuel and other waste matter are converted chemically or by photosynthesis into oxygen water and food Closed Ecological Systems Can They Save the Future What is a Closed Ecological System Why Would We Need Closed Ecological Systems What Are the Different Types of Closed Ecological Systems BIOS 1 BIOS 2 and BIOS 3 Biosphere 2 MELiSSA What Are the Challenges of Creating Closed Ecological Systems

Global Environmental Harm Rob White, 2013-01-11 This book brings together original cutting edge work that deals with global environmental harm from a wide variety of geographical and critical perspectives The topics covered in the book are global regional and local in nature although in each case there are clear transnational or global dimensions The book explores topics that provide theoretical methodological and substantive insights into the nature and dynamics of environmental harm and the transference of this harm across regions continents and globally Specific topics include the criminal nature of global warming an ethnographic study of pollution and consciousness of environmental harm environmental destruction associated with huge industrial developments chaos theory and environmental social justice de forestation as a global phenomenon illegal trade in endangered species and transference of toxicity The collection as a whole reinforces the importance of eco global criminology as a dynamic paradigm for theory and action on environmental issues in the 21st century The criminological perspectives presented herein are important both in

discerning the nature and complexities of global environmental harms and ultimately in forging responses to them

Sustainable Consumption Dale Southerton, Alistair Ulph, 2014 If global society is to address the many environmental and other sustainability challenges that confront us in the twenty first century such as climate change and water resources it will be necessary to make significant changes in our patterns of consumption production and distribution There is a growing realization that while changes in production and distribution are formidable the proposed solutions may not succeed unless it is possible to persuade individuals and households to change their patterns of consumption to make them more sustainable However there are significant differences in how key disciplines such as psychology neuroscience economics politics sociology anthropology and history conceptualise consumption empirically test their theoretical predictions and use these to inform policy makers across the private public and third sectors on how to make consumption more sustainable This book contains chapters from world leading experts in these different disciplines that seek to explain the perspectives on sustainable consumption of their disciplines suggest how these might be further enriched by taking on board some of the findings from other disciplines and consider what this implies for new policies to address the key sustainability challenges outlined above The book is dedicated to Professor Sir Partha Dasgupta one of the world's leading economists who has worked across a range of topics including environmental and resource economics and development economics and throughout his career has sought to incorporate into his economic thinking ideas from a range of other disciplines *Global Challenges in Integrated Coastal Zone Management* Einar Dahl, Josianne Støttrup, 2012-12-18 Growing pressure from increasingly diverse human activities coupled with climate change impacts threaten the functional integrity of coastal ecosystems around the globe A multi disciplinary approach towards understanding drivers pressures and impacts in the coastal zone requires effective integration of data and information in policy and management combining expertise from nature and social science to reach a balanced and sustainable development of the coastal zone This important book comprises the proceedings of The International Symposium on Integrated Coastal Zone Management which took place in Arendal Norway between 3-7 July 2011 The main objective of the Symposium was to present current knowledge and to address issues on advice and management related to the coastal zone The major themes of papers included in this book are Coastal habitats and ecosystem services Adaptation mitigation to change in coastal systems Coastal governance Linking science and management Comprising a huge wealth of information this timely and well edited volume is essential reading for all those involved in coastal zone management around the globe All libraries in research establishments and universities where marine aquatic and environmental sciences and fisheries and aquatic sciences are studied and taught will need copies of this important volume on their shelves **Ecological Networks** Mercedes Pascual, Jennifer A. Dunne, 2006 Food webs are one of the most useful and challenging objects of study in ecology These networks of predator-prey interactions conjured in Darwin's image of a tangled bank provide a paradigmatic example of complex adaptive systems This book is based on a February 2004 Santa

Fe Institute workshop Its authors treat the ecology of predator prey interactions food web theory structure and dynamics The book explores the boundaries of what is known of the relationship between structure and dynamics in ecological networks and will define directions for future developments in this field **Business Strategies for Sustainability** Helen Borland,Adam Lindgreen,Francois Maon,Véronique Ambrosini,Beatriz Palacios Florencio,Joelle Vanhamme,2018-10-03 Business Strategies for Sustainability brings together important research contributions that demonstrate different approaches to business strategies for sustainability Many corporate initiatives toward what firms perceive to be sustainability are simply efficiency drives or competitive moves falling far short of actual strategies for ecological sustainability To suggest true ecological sustainability strategies this new research anthology adopts an interdisciplinary or transdisciplinary approach to discern what business strategies might look like if they were underpinned by environmental and ecological science The 23 chapters in this anthology reflect five main topic sections a delineating sustainability challenges and visions b contradiction integration and transformation of business and sustainability logics c innovating and developing strategic capabilities for sustainability d assessing and valuing sustainability and e toward multi level engagement and collaboration
