Biological Magnetic Resonance Lawrence J. Berliner, 2012-12-06 We are pleased to present this second volume of a series that has already received much interest The application of magnetic resonance methods to the study of actual biological systems as contrasted to cell free samples although not entirely novel as demonstrated by Civan and Shporer in Volume I has taken on new dimensions with the use of phosphorus 31 and carbon 13 NMR in studying cells tissues and organelles The applications of 31 P NMR to such systems is reviewed in this volume while carbon 13 will be covered in a later one The use of nitroxide spin labels has grown to the point where it now may be considered a common biological technique The synthesis and applications of a new class of nitroxides is described in this volume ESR spectroscopy of paramagnetic ions is a powerful approach to studying molecular and structural details as the chapter by Boas Pilbrow and Smith on the ESR of copper in Volume 1 has shown In this volume the ESR of molybdenum and iron is treated in a comparable fashion In the first volume some aspects of 1 H NMR spectroscopy of certain classes of In this volume the high resolution biological macromolecules were discussed tion multinuclear NMR spectra of peptides including the physiologically significant peptide hormones are reviewed
