

# Continental Drift

- Continental drift is the movement of Earth's continents on great plates that float on the hot, underlying mantle.
- Plate movements rearrange geography slowly, but their cumulative effects are dramatic. In addition to reshaping physical features of our planet, continental drift has a major impact on life on Earth.
- Formation of the supercontinent **Pangaea** about 250 million years ago had many effects:
  - A reduction in shallow water habitat; a colder and drier climate inland; changes in climate as continents moved toward and away from the poles; changes in ocean circulation patterns leading to global cooling.

*Sea Floor Spreading and Continental Drift* J. Coulomb, 2012-12-06 Studies of the magnetic anomalies paralleling ocean ridges have furnished partisans of continental drift with decisive arguments To take stock of this important question my colleague Thellier and I decided in the early summer of 1967 to make it the subject of the annual seminar on Earth physics for the school year 1967-68 Although research was still developing rapidly the General Assembly of the International Union of Geodesy and Geophysics held in Switzerland in September particularly some of the meetings in Zurich under the auspices of the International Committee for the Upper Mantle appeared to confirm that we had made no important omissions At the conclusion of the seminar where I had been responsible for most of the lectures I resolved to write the present volume for the non specialized scientific reader The project turned out to be a good deal more ambitious than I had thought It is quite an undertaking nowadays to try to survey a rapidly growing subject first of all because of the difficulty of gathering material publication delays are now nearing one year with the result that specialists communicate largely through a selective distribution of reports as well as verbally in frequent colloquia I warmly thank those who helped me in getting unpublished literature especially Xavier Le Pichon Even so some essential work came to my knowledge only lately

*The Variscan Belt of Western Europe, Volume 1* Yoann Denele, Julien Berger, 2023-07-21 This book deals with the geological record and the evolution of ideas concerning the Variscan orogenic belt in France and neighboring regions Volume 1 is based on a general introduction concerning the imprint of the Variscan period on the geology of France as well as on the particularities of the study of this ancient orogen A history of the concepts applied to the Variscan belt is proposed in order to consider this orogen in the history of Earth Sciences A paleogeodynamic analysis of the Variscan cycle sets the general

framework for the evolution of the orogen which is then tackled through the prism of the magmatic metamorphic and tectonic record of the early phases from Cambrian to Lower Carboniferous Volume 2 proposes an analysis of the late evolution of the Variscan orogenic belt reflecting its dismantling in a high temperature context during the Upper Carboniferous and Permian The sedimentary archives are described as well as the questions raised by the specificities of this ancient orogen *Recent Crustal Movements* Nazario Pavoni, Ronald Green, 1975 This special issue of Tectonophysics contains 55 papers presented at the Fifth International Symposium on Recent Crustal Movements held in Zurich Switzerland from 26 to 31 August 1974 *Paleobiogeography* Charles A. Simonson, 2012-12-14 Impact cratering is an important geological process on all solid planetary bodies and in the case of Earth may have had major climatic and biological effects Most terrestrial impact craters have been erased or modified beyond recognition However major impacts throw ejecta over large areas of the Earth's surface Recognition of these impact ejecta layers can help fill in the gaps in the terrestrial cratering record and at the same time provide direct correlation between major impacts and other geological events such as climatic changes and mass extinctions This book provides the first summary of known distal impact ejecta layers *Research on the Past Climate and Continental Drift* Tingying Ma, 1952 *Research on the Past Climate and Continental Drift*, 1951 **Bibliographic Set (2 Vol Set).**
