ABSTRACT. Patagonian toothfish (*Dissostichus eleginoides*) is a highly prized resource in markets due to the quality of its meat. The Commission for the Conservation of Antarctic Marine Living Resources (CCAMLR) implemented controls and regulations in response to the sharp rise in the illegal fishing of *D. eleginoides* in the 1990s. Today, four fisheries in waters close to the southern tip of South America are managed in accordance with stringent sustainability standards. Even though they are separate management units, both abundance assessments and annual catch allocations are conducted using different criteria regarding stock considerations across the region, leaving one of the fundamental premises of fisheries management unclear. This study examines historical data and recent research to explore the potential differentiation between Patagonian toothfish populations in South American waters, which is crucial for the management of diverse fisheries. Genetic studies, otolith microchemistry, morphometry, parasitic fauna, tagging programs, reproductive characteristics, and the impact of ocean circulation on dispersal and recruitment were analyzed. Tagging studies in the southern hemisphere oceans confirm the species' affinity to specific habitats, suggesting minimal fish exchange between South American fishing grounds. From a fisheries perspective, this review suggests the existence of distinct stocks of the species structured along the shelf and slope of the southern cone of America based on reproduction areas along the continental shelves and slope, the diverse parasitic fauna, the variability in stable isotopes and trace elements of otoliths, and the little significant exchange of fish between current fishing grounds. All of this could lead to considering the *D. eleginoides* fishery as independent exploitation units.

Key words: Stocks, structure, South American fisheries.

Stocks de merluza negra (*Dissostichus eleginoides*) en aguas sudamericanas y sus implicancias para la gestión pesquera

RESUMEN. La merluza negra (*Dissostichus eleginoides*) es un recurso muy apreciado en los mercados debido a la calidad de su carne. La Comisión para la Conservación de los Recursos Vivos Marinos Antárticos (CCRVMA) implementó controles y regulaciones en respuesta al marcado aumento de la pesca ilegal de *D. eleginoides* en la década de 1990. Hoy, cuatro pesquerías en aguas cercanas al extremo sur de América del Sur se gestionan de acuerdo con estrictos estándares de sostenibilidad. Si bien son unidades de gestión separadas, tanto las evaluaciones de abundancia como las asignaciones anuales de captura se realizan utilizando diferentes criterios en cuanto a consideraciones de stock en toda la región, lo que deja sin aclarar una de las premisas fundamentales de la gestión pesquera. Este estudio examina datos históricos e investigaciones recientes para explorar la diferenciación potencial entre las poblaciones de merluza negra en aguas sudamericanas, crucial para el manejo de pesquerías diversas. Se analizaron estudios genéticos, microquímica de otolitos, morfometría, fauna parasitaria, programas de marcaje, características reproductivas e impacto de la circulación oceánica en la

Managed Annihilation Dean Bavington, 2011-01-01 The Newfoundland and Labrador cod fishery was once the most successful commercial fishery in the world When it collapsed in 1992 many pointed to failures in management such as uncontrolled harvesting as likely culprits Managed Annihilation makes the case that the idea of natural resource management itself was the problem The collapse occurred when the fisheries were state managed and still two decades later there is no recovery in sight Although the collapse raised doubts among policy makers about their ability to understand and control nature their ultimate goal of control through management has not wavered and has been transferred from wild fish to fishermen and farmed cod

Environmental Inequalities Beyond Borders Joann Carmin, Julian Agyeman, 2011-04-04 Case studies demonstrate the spatial disconnect between global consumption and production and its effects on local environmental quality and human rights Multinational corporations often exploit natural resources or locate factories in poor countries far from the demand for the products and profits that result Developed countries also routinely dump hazardous materials and produce greenhouse gas emissions that have a disproportionate impact on developing countries This book investigates how these and other globalized practices exact high social and environmental costs as poor local communities are forced to cope with depleted resources pollution health problems and social and cultural disruption Case studies drawn from Africa Asia the Pacific Rim and Latin America critically assess how diverse types of global inequalities play out on local terrains These range from an assessment of the pros and cons of foreign investment in Fiji to an account of the work of transnational activists combating toxic waste disposal in Mozambique Taken together the chapters demonstrate the spatial disconnect between global consumption and production on the one hand and local environmental quality and human rights on the other The result is a rich perspective not only on the ways industries governments and consumption patterns may further entrench existing inequalities but also on how emerging
