Proceedings of the 2002 ACM SIGPLAN International Conference on Functional Programming (ICFP '02), 2002

Applied Artificial Intelligence Reporter, 1987 Coordination of Distributed Problem Solvers Edmund H.

Durfee, 2012-12-06 As artificial intelligence AI is applied to more complex problems and a wider set of applications the ability to take advantage of the computational power of distributed and parallel hardware architectures and to match these architectures with the inherent distributed aspects of applications spatial functional or temporal has become an important research issue Out of these research concerns an AI subdiscipline called distributed problem solving has emerged Distributed problem solving systems are broadly defined as loosely coupled distributed networks of semi autonomous problem solving agents that perform sophisticated problem solving and cooperatively interact to solve problems Nodes operate asynchronously and in parallel with limited internode communication Limited internode communication stems from either inherent bandwidth limitations of the communication medium or from the high computational cost of packaging and assimilating information to be sent and received among agents Structuring network problem solving to deal with consequences of limited communication the lack of a global view and the possibility that the individual agents may not have all the information necessary to accurately and completely solve their subproblems is one of the major focuses of distributed problem solving research It is this focus that also is one of the important distinguishing characteristics of distributed problem solving research that sets it apart from previous research in AI

**A Guided Tour of Artificial Intelligence Research** Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of

knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI This third volume is dedicated to the interfaces of AI with various fields with which strong links exist either at the methodological or at the applicative levels The foreword of this volume reminds us that AI was born for a large part from cybernetics Chapters are devoted to disciplines that are historically sisters of AI natural language processing pattern recognition and computer vision and robotics Also close and complementary to AI due to their direct links with information are databases the semantic web information retrieval and human computer interaction All these disciplines are privileged places for applications of AI methods This is also the case for bioinformatics biological modeling and computational neurosciences The developments of AI have also led to a dialogue with theoretical computer science in particular regarding computability and complexity Besides AI research and findings have renewed philosophical and epistemological questions while their cognitive validity raises questions to psychology The volume also discusses some of the interactions between science and artistic creation in literature and in music Lastly an epilogue concludes the three volumes of this Guided Tour of AI Research by providing an overview of what has been achieved by AI emphasizing AI as a science and not just as an innovative technology and trying to dispel some misunderstandings
