on Rhetoric James Jasinski,2001-07-19 This book is designed to introduce readers to the language of contemporary rhetorical studies The book format is an alphabetized glossary with appropriate cross listings of key terms and concepts in contemporary rhetorical studies An introductory chapter outlines the definitional ambiguities of the central concept of rhetoric itself The primary emphasis is on the contemporary tradition of rhetorical studies as it has emerged in the discipline of speech communication Each entry in the glossary ranges in length from a few paragraphs to a short essay of a few pages Where appropriate examples are provided to further illustrate the term or concept Each entry will be accompanied by a list of references and additional readings to direct the reader to other materials of possible interest   Occupational Safety and Health: General industry standards and interpretations United States. Occupational Safety and Health Administration,1972   **Iceberg Semantics for Mass Nouns and Count Nouns** Fred Landman,2020-07-30 Iceberg semantics is a new framework of Boolean semantics for mass nouns and count nouns in which the interpretation of a noun phrase rises up from a generating base and floats with its base on its Boolean part set like an iceberg The framework is shown to preserve the attractive features of classical Boolean semantics for count nouns the book argues that Iceberg semantics forms a much better framework for studying mass nouns than the classical theory does Iceberg semantics uses its notion of base to develop a semantic theory of the differences between mass nouns and count nouns and between different types of mass nouns in particular between prototypical mass nouns here called mess mass nouns like water and mud versus object mass nouns here called neat mass nouns like poultry and pottery The book shows in detail how and why neat mass nouns pattern semantically both with mess mass nouns and with count nouns Iceberg semantics is a compositional theory and in Iceberg semantics the semantic distinctions defined apply to noun phrases of any complexity The book studies in depth the semantics of classifier noun phrases like three glasses of wine and measure noun phrases like three liters of wine The classical wisdom is that classifier interpretations are count Recent literature has argued compellingly that measure interpretations are mass The book shows that both connections follow from the basic architecture of Iceberg semantics Audience Scholars and students in linguistics in particular semantics pragmatics computational linguistics and syntax and neighbouring disciplines like logic philosophy of language and cognitive science   **Abstraction in Ontology-based Data Management** G. Cima,2022-03-08 Effectively documenting data services is a crucial issue in any organization not only for governing data but also for interoperation purposes Indeed in order to fully realize the promises and benefits of a data driven society data driven approaches need to be resilient transparent and fully accountable This book Abstraction in Ontology based Data Management proposes a new approach to automatically associating formal semantic description to data services thus bringing them into compliance with the FAIR Findable Accessible Interoperable and Reusable guiding principles The approach is founded on the Ontology based Data Management OBDM paradigm in which a domain ontology is used to provide a high level semantic layer mapped to the source schema of an organization containing data thus abstracting from the technical details of the data layer

implementation A formal framework for a novel reasoning task in OBDM called Abstraction is introduced in which a data service is assumed to be expressed as a query over the source schema and the aim is to derive a query over the ontology that semantically describes the given data service best with respect to the underlying OBDM specification In a general scenario that uses the most popular languages in the OBDM literature an in depth complexity analysis of two computational problems associated with the framework is carried out Also investigated is the problem of expressing abstractions in a non monotonic query language as well as the impact of adding inequalities Regarding the latter the problem of answering queries with inequalities over lightweight ontologies is first studied Lastly the author illustrates how the achieved results contribute to new results in the Semantic Web context and in the Relational Database theory The book will be of interest to all those engaged in Artificial Intelligence and Data Management   *Design and Analysis of Experiments with R* John Lawson,2014-12-17 Design and Analysis of Experiments with R presents a unified treatment of experimental designs and design concepts commonly used in practice It connects the objectives of research to the type of experimental design required describes the process of creating the design and collecting the data shows how to perform the proper analysis of the data   *Diagnostic Methods and Interpretation in Internal Medicine* Samuel Aaron Loewenberg,1929   **Countability in Natural Language** Hana Filip,2021-07-01 This book focuses on current theoretical and empirical research into countability in the nominal domain and to a lesser extent in the verbal domain The presented state of the art studies are situated within compositional semantics combined with the theory of mereology and draw on a wealth of data some of which have hitherto been unknown from a number of typologically distinct languages Some contributions propose enrichments of classical extensional mereology with topological and temporal notions as well as with type theory and probabilistic models The book also presents analyses that rely on cutting edge empirical research experimental corpus based into meaning in language It is suitable as a point of departure for original research or material for seminars in semantics philosophy of language psycholinguistics and other fields of cognitive science It is of interest not only to a semanticist but also to anybody who wishes to gain insights into the contemporary research into countability   **Medical Bulletin** ,1928   **United States Veterans Bureau Medical Bulletin** United States.
