**Vitebsk** Aleksandra Semenovna Shatskikh, 2007-01-01 This book examines the artistic life of Vitebsk during the years 1917-1922 when a great burst of creative experimentation transformed the modest Russian town into one of the most influential gateways to the art of the twentieth century. Spurred by native son Marc Chagall who returned home after the October Revolution in 1917 to take the position of art commissioner, Vitebsk rose to a pinnacle of fame as an artistic laboratory for the avant garde. It was here that such luminaries as El Lissitzky, Yuri Pen, Kazimir Malevich, Nikolai Suetin, Mikhail Bakhtin, and others worked, inspired one another, and made distinctive contributions to modernism. Art historian Aleksandra Shatskikh surveys the entire Vitebsk phenomenon, drawing on an array of archives in Russia and Amsterdam, many of which have never been open to Western scholars. She discusses Chagall's Academy of Art and its major teachers and students, the founding of the artists group UNOVIS, Malevich's architectural experiments, Bakhtin's circle, and important developments in theater and music in Vitebsk. With more than two hundred outstanding illustrations, the book brings Vitebsk to life at a fascinating and transformative moment in art history.

**Multidisciplinary Approaches to Visual Representations and Interpretations**, 2004-12-09 The value of multi-disciplinary research lies in the exchange of ideas and methods across the traditional boundaries between areas of study. It could be argued that many of the advances in science and engineering take place because the ideas, methods, and the tools of thought from one discipline become re-applied in another. The topic of the visual has become increasingly important as advances in technology have led to multi-media and multi-modal representations and extended the range and scope of visual representation and interpretation in our lives. Under this broad heading, there are many different perspectives and approaches from across the entire spectrum of human knowledge and activity. The editors and authors of this book aim to break down cross-disciplinary barriers by bringing together people working in a wide variety of disciplines where visual representations and interpretations are exploited. Contributions come from researchers actively investigating visual representations and interpretations in a wide variety of areas including art history, biology, clinical science, cognitive science, computer science, design, engineering, linguistics, mathematics, philosophy, physics, psychology, and sociology. The book provides a forum for wide-ranging and multi-disciplinary contributions on visual representations and interpretations. Contributors include researchers actively investigating visual representations and interpretations. Content spans a wide variety of areas including but not limited to biology, sociology, and computer science. Discusses how new technology has affected the visual representation of information.
