Making Sense of Lung Function Tests Jonathan

Dakin, Mark Mottershaw, Elena Kourteli, 2017-07-06 Respiratory problems are the most common cause of acute admission to hospital. A variety of diagnostic investigations are required both for acute and clinic assessment. Making Sense of Lung Function Tests, Second Edition, familiarises both trainees and more experienced clinicians with the interpretation of a range of respiratory parameters. It places lung function in a clinical context using real life examples and provides invaluable hands-on guidance. For this second edition, Consultant Respiratory Physician Jonathan Dakin and Consultant Anaesthetist Elena Kourteli are joined by Mark Mottershaw, Chief Respiratory Physiologist from Queen Alexandra Hospital, Portsmouth, all contributing a broad range of expertise and perspectives. Together they have updated the book throughout and added new chapters including an algorithm for interpretation of pulmonary function tests, exhaled nitric oxide (FENO) and cardiopulmonary exercise testing. The text offers a clear explanation of the concepts which students find difficult including the basis of obstructive and restrictive defects, pattern recognition of the flow-volume loop, differences between TLC_O and KCO, assessment of oxygenation using PO₂ and SO₂, the basis of Type 1 and Type 2 respiratory failure, distinguishing respiratory and metabolic acidosis, the relationship between sleep and respiratory failure. The information is presented in an accessible way suitable for those seeking a basic grounding in spirometry or blood gases but also sufficiently comprehensive for readers completing specialist training in general or respiratory medicine.

Clinical Focus Series-Pulmonary Function Testing and Interpretation Hansen James E, 2011-12-15 Doody Rating 4 stars The primary target audiences for this volume are pulmonologists, allergists, graduate students, thoracic surgeons and their assistants in training and in practice who evaluate and treat patients who have or may have respiratory damage or disease. Unique insights into the interpretation of spirometric lung volume, diffusing capacity and other measurements commonly made in pulmonary function laboratories. Normal values are dependent on gender, age and body size. It considers the main respiratory conditions affecting athletes and delivers practical advice for the management of respiratory issues in athletic populations. With contributions from leading international experts, the book discusses fundamental scientific principles and provides pragmatic hands-on clinical guidance to enable practical application. Each chapter includes useful pedagogical features such as case studies and guides for carrying out assessments. The book covers a wide range of topics including respiratory system function during exercise, impact of the environment on the upper and lower airways, asthma-related issues in athletes, allergic rhinitis in athletes, exercise-induced laryngeal obstruction, exercise-induced dysfunctional breathing patterns, respiratory muscle training, role of screening for respiratory issues in athletes, assessing and dealing with respiratory infections in athletes. This text is key reading for both newly qualified and established medical, scientific and therapy practitioners who are working with athletes with respiratory issues. It is also a valuable

resource for students of sports medicine sports therapy and sport and exercise science courses **Pulmonary Function**
