Intracontinental Fold Belts H. Martin, F. W. Eder, 2012-12-06 Final Report of the Sonderforschungsbereich 48 Göttingen Entwicklungen Bestand und Eigenschaften der Erdkruste insbesondere der Geosynklinalräume Circum-Arctic Structural Events Karsten Piepjohn, Justin V. Strauss, Lutz Reinhardt, William C. McClelland, 2019-05-23 To recognize the 25th anniversary of the Circum Arctic Structural Events program an effort organized by the Bundesanstalt für Geowissenschaften und Rohstoffe this volume presents results from 18 major field expeditions involving 100 geoscientists from a spectrum of disciplines The volume focuses on the Proterozoic to Cenozoic tectonic evolution of the circum Arctic region with correlations to adjacent orogens **Intra-continental Fold Belts**, 2001 **Orogenic Processes** Wolfgang Franke (géologue.), 2000

Tectonic Controls and Signatures in Sedimentary Successions Lynne E. Frostick, 2009-04-13 Stratigraphers and sedimentologists who are presently describing and interpreting the infill of sedimentary basins are generally agreed that it is difficult to disentangle the signatures of tectonic processes from those of climate and eustatic sea level change in the resultant rock succession Until better criteria are developed to distinguish between the roles played by the major variables it is still most useful to document and interpret basin fill architectures where we know from independent evidence that one of the main controls is likely to have been a major contributor This book contains a collection of papers describing situations where the tectonic setting is fairly well established and it can be assumed that at least the tectonic factor has contributed to the resultant signatures *Patterns of Change in Earth Evolution* H.D. Holland, A.F. Trendall, 2012-12-06 3 of the experience of the last few generations The group of happily unexperienced events includes large bolide impacts with the Earth The evidence for the occurrence of such impacts at intervals of some tens of millions of years is quite convincing and Lyell stands admonished by Hamlet There are more things in heaven and earth Horatio than are dreamt of in your philosophy The role of bolide impacts on the history of life during other portions of the Phanerozoic Eon is less clear see Raup and Fischer both this volume and catastrophic changes unrelated to extraterrestrial processes may have been important see Holser this volume Changes in the later Precambrian biota are still difficult to interpret in part because the preservation of soft bodied animals from this period of Earth history is so unusual see Seilacher this volume During the past billion years or so bolide impacts have exerted a significant effect on the Earth's surface and its inhabitants but not on its interior The 3800 Ma rocks at Isua in West Greenland are the oldest terrestrial rocks that are currently available for inspection see Dymek this volume They contain abundant evidence for the operation of chemical and physical processes that are similar to those of the present day This situation could not have prevailed during the entire 700 Ma preceding the formation of the Isua rocks Canadian Journal of Earth Sciences, 2015 Pre-Permian Geology of Central and Eastern Europe R.D. Dallmeyer, W. Franke, K. Weber, 2013-06-29 In August 1990 Project 233 of the International Geological Correlation Program hosted an international conference in Göttingen Giessen Germany Discussions were focused on the Tectonothermal and Stratigraphic Evolution of

the Central European Orogens The meeting marked the first opportunity for completely open scientific exchange following the recent political reformations in central Europe This exciting new atmosphere of international cooperation resulted in presentation of a wealth of information which was new to scientists from both sides of former political boundaries It was apparent that a unique opportunity was available to prepare a systematic overview in a volume dealing with the geology of Central Europe The present book represents an outgrowth of this conference but is not merely a compilation of the papers presented in Göttingen Giessen Instead it represents a coordinated volume designed to present a balanced comprehensive view of our present understanding of the tectonothermal and stratigraphic evolution of the Central European orogens We gratefully acknowledge the help of the national funding agencies who have financed much of the research work summarized in this book and of the International Geological Correlation Programme IGCP project no 233 which provided and helped to finance the organisational framework We are indebted to Springer Verlag for thorough copy editing and production of this book and we sincerely appreciate the efforts of all the reviewers whose comments have greatly helped to improve the quality of this volume We also thank the various contributors for their diligence and perseverance in manuscript preparation
