Shah, 2024-10-25 The immune system is a group of complex biological structures and processes in an organism which gives protection against wide range of pathogenic organisms and simultaneously distinguishes these pathogens from organism's own healthy cells and tissues thus maintaining homeostasis in the body. It has been an age old practice to use extracts and other parts of various plants in treating many diseases. Several plants contain various pharmacologically active substances which can be used to treat different diseases. Among these medicinal plants many have shown good immunomodulatory properties and could act as natural immunosuppressant agents in treating autoimmune disorders. In 12 chapters besides covering the basic concepts of immune system and its function Autoimmune diseases and Medicinal Plants provides a comprehensive knowledge of autoimmune diseases and the role of various medicinal plant products in their treatment. Elucidates in depth knowledge on the basics of Immunology as well as the various autoimmune disorders and the medicinal plant extracts which could be an alternative and safe approach for their treatment and management. Provides updated content on the role of different medicinal plants in curing autoimmune diseases. Includes a section at the end of each autoimmune disease giving a comparison between the treatment with conventional drugs and the medicinal plant products. Explains the benefits and risks of both treatment regimens in comprehensive yet easily understandable way **Crowley's**

The Immune System: A Very Short Introduction Paul Klenerman, 2017-11-30 The immune system is central to human health and the focus of much medical research. Growing

understanding of the immune system and especially the creation of immune memory long lasting protection which can be harnessed in the design of vaccines have been major breakthroughs in medicine In this Very Short Introduction Paul Klenerman describes the immune system and how it works in health and disease In particular he focuses on the human immune system considering how it evolved the basic rules that govern its behaviour and the major health threats where it is important The immune system comprises a series of organs cells and chemical messengers which work together as a team to provide defence against infection Klenerman discusses these components the critical signals that trigger them and how they exert their protective effects including so called innate immune responses which react very fast to infection and adaptive immune responses which have huge diversity and a capacity to recognise and defend against a massive array of micro organisms Klenerman also considers what happens when our immune systems fail to be activated effectively leading to serious infections problems with inherited diseases and also HIV AIDS At the opposite extreme as Klenerman shows an over exaggerated immune response leads to inflammatory diseases such as Multiple Sclerosis and Rheumatoid Arthritis as well as allergy and asthma Finally he looks at the Immune system v2 o how immune therapies and vaccines can be advanced to protect us against the major diseases of the 21st century ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
