Introduction To Catalytic Combustion

Andrzej Cybulski, Jacob A. Moulijn

Introduction To Catalytic Combustion:

Introduction to Catalytic Combustion R.E. Hayes, Stan T. Kolaczowski, 1998-01-26 In a clear and concise manner this book explains how to apply concepts in chemical reaction engineering and transport phenomena to the design of catalytic combustion systems Although there are many textbooks on the subject of chemical reaction engineering catalytic combustion is mentioned either only briefly or not at all The authors have chosen three examples where catalytic combustion is utilized as a primary combustion process and natural gas is used as a fuel stationary gas turbines process fluid heaters and radiant heaters these cover much of the area where research is currently most active In each of these there are clear environmental benefits to be gained illustrating catalytic combustion as a cleaner primary combustion process The dominant heat transfer processes in each of the applications are different as are the support systems flow geometrics and operating conditions

Structured Catalysts and Reactors Andrzej Cybulski, Jacob A. Moulijn, 2005-11-02 Interest in structured catalysts is steadily increasing due to the already proven as well as potential advantages of these catalysts Updating the comprehensive coverage of the first edition published in 1998 with the latest science and applications Structured Catalysts and Reactors Second Edition gives detailed information on all aspects of structured catalysts and reactors including materials mass transfer selectivity activity and stability catalyst preparation design and characterization process development modeling and optimization reactor design and operation costs and considerations The book first examines how monolithic catalysts are used to clean exhaust gas from gasoline engines treat industrial off gases burn fuels in commercial settings and synthesize chemicals in two and three phase processes It discusses configurations microstructure physical properties and manufacture of ceramic and metallic monoliths before directing its focus to arranged catalysts and structured packings in terms of mass transfer The book then explores catalytically active membranes and filters featuring metallic membranes permeation mechanisms preparation and modeling commercial membranes and the latest applications such as zeolitic membranes Finally several chapters present techniques for incorporating catalytic species into the structured catalyst support and controlling catalyst nanoporosity This book conveys the scientific as well as economic advantages of using these unconventional catalytic techniques With over 1500 references tables drawings and photographs as well as in depth discussions and a new approach to catalytic processes Structured Catalysts and Reactors Second Edition is an essential reference for anyone working with or studying catalysis

Catalysis James J Spivey, 2007-10-31 There is an increasing challenge for chemical industry and research institutions to find cost efficient and environmentally sound methods of converting natural resources into fuels chemicals and energy Catalysts are essential to these processes and the Catalysis Specialist Periodical Report series serves to highlight major developments in this area This series provides systematic and detailed reviews of topics of interest to scientists and engineers in the catalysis field The coverage includes all major areas of heterogeneous and homogeneous catalysis and also specific applications of catalysis such as NO_x control kinetics and

experimental techniques such as microcalorimetry Each chapter is compiled by recognised experts within their specialist fields and provides a summary of the current literature This series will be of interest to all those in academia and industry who need an up to date critical analysis and summary of catalysis research and applications Catalysis will be of interest to anyone working in academia and industry that needs an up to date critical analysis and summary of catalysis research and applications Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading experts in their specialist fields this series is designed to help the chemistry community keep current with the latest developments in their field Each volume in the series is published either annually or biennially and is a superb reference point for researchers

Chemistry of the Platinum Group Metals F.R. Hartley, 2013-10-22 The chemistry of platinum group metals is a rapidly expanding commercially important field It is dominated by the catalytic properties of the metals They are useful in petrochemical and general chemical plants and are becoming increasingly important as autocatalysts for pollution control The book covers recent developments in the chemistry of the six platinum group metals namely platinum palladium rhodium iridium ruthenium and osmium The material falls into three broad areas Firstly the occurrence extraction and use of the metals especially in catalysis electrochemistry energy and electronics Secondly organometallic and homogeneous catalytic chemistry and last but not least coordination chemistry including biochemistry and cancer therapy The work is aimed at scientists in universities and in industry using any of the six platinum group metals in research It will be useful for those studying the compounds of the metals themselves and those considering to use either the metals or their complexes and catalysts in their experimental work

Handbook Of Advanced Methods And Processes In Oxidation Catalysis: From Laboratory To Industry Daniel Duprez, Fabrizio Cavani, 2014-07-24 This book offers a comprehensive overview of the most recent developments in both total oxidation and combustion and also in selective oxidation For each topic fundamental aspects are paralleled with industrial applications The book covers oxidation catalysis one of the major areas of industrial chemistry outlining recent achievements current challenges and future opportunities One distinguishing feature of the book is the selection of arguments which are emblematic of current trends in the chemical industry such as miniaturization use of alternative greener oxidants and innovative systems for pollutant abatement Topics outlined are described in terms of both catalyst and reaction chemistry and also reactor and process technology

Advanced Combustion Science Tsuneo Someya, 2012-12-06 Non uniform combustion as encountered in diesel and gas turbine engines furnaces and boilers is responsible for the conversion of fossil fuel to energy and also for the corresponding formation of pollutants In spite of great research efforts in the past the mechanism of non uniform combustion has remained less explored than that of other combustion types since it consists of many mostly transient processes which

influence each other In view of this background a group research project Exploration of Combustion Mechanism was established to explore the mechanism of combustion especially that of diffusive combustion and also to find efficient ways to control the combustion process for better utilization of fuel and the reduction of pollutant emission The group research was started after preparatory activity of 2 years in April 1988 for a period of 3 years as a project with a Grant in Aid for Scientific Research of Priority Area subsidized by the Ministry of Education Science and Culture of Japan The entire group of 43 members was set up as an organizing committee of 13 members and five research groups consisting of 36 members The research groups were 1 Steady combustion 2 Unsteady spray combustion 3 Control of combustion 4 Chemistry of combustion and 5 Effects of fuels At the beginning of the project it was agreed that we should pursue the mechanism of combustion from a scientific viewpoint namely the target of the project was to obtain the fundamentals or know why rather than know how of combustion

Environmental Catalysis F J J G Janssen, Rutger A Van Santen, 1999-04-14 This book brings together highlights of a theme which is growing in interest the creation of a sustainable society using catalysis as the main tool Catalysts play key roles in the production of clean fuels the conversion of waste and green raw materials into energy clean combustion engines including control of NO_x and soot production and reduction of greenhouse gases production of clean water and of polymers as well as reduction from polymers to monomers Catalysts are also of prime importance in the developing H₂ and syngas production technology aimed at producing clean fuels for the coming decades And catalysts can be recycled

Natural Gas Conversion V A. Parmaliana, D. Sanfilippo, F. Frusteri, A. Vaccari, F. Arena, 1998-09-17 On January 1988 the ascertained and economically accessible reserves of Natural Gas NG amounted to over 144 000 billion cubic meters worldwide corresponding to 124 billion tons of oil equivalents comparable with the liquid oil reserves which are estimated to be 138 billion TOE It is hypothesized that the volume of NG reserve will continue to grow at the same rate of the last decade Forecasts on production indicate a potential increase from about 2 000 billion cubic meters in 1990 to not more than 3 300 billion cubic meters in 2010 even in

a high economic development scenario NG consumption represents only one half of oil 1 9 billion TOE y as compared to 3 5 of oil Consequently in the future gas will exceed oil as a carbon atom source In the future the potential for getting energetic vectors or petrochemicals from NG will continue to grow The topics covered in Natural Gas Conversion V reflect the large global R D effort to look for new and economic ways of NG exploitation These range from the direct conversion of methane and light paraffins to the indirect conversion through synthesis gas to fuels and chemicals Particularly underlined and visible are the technologies already commercially viable These proceedings prove that mature and technologically feasible processes for natural gas conversion are already available and that new and improved catalytic approaches are currently developing the validity and feasibility of which will soon be documented This is an exciting area of modern catalysis which will certainly open novel and rewarding perspectives for the chemical energy and petrochemical industries
