*A London Bibliography of the Social Sciences* ,1931 Vols 1 4 include material to June 1 1929      *Environment and Development: An Economic Approach* Jan Bojö,Karl-Göran Mäler,Lena Unemo,2012-12-06 This book is a thoroughly revised text based on a report commissioned by the Swedish International Development Authority SIDA The financial grant from SIDA which made the work possible is hereby gratefully acknowledged We gratefully accepted the offer from Kluwer Academic Publishers to revise the text Hopefully the text can be of interest to decision makers development programme personnel teachers and the general public interested in how economics can contribute to better environmental decision making There are already many books on the market about environmental economics some of them very good What is special about this one We do not claim to have obtained new results but we have our own way of presenting the subject matter In

particular we are of the opinion that policy failures are often overlooked as an obstacle to efficient environmental management Although the main emphasis in this book is on project level analysis it is essential that such analyses be linked to an understanding of the disincentives for environmental improvements that general economic and particular environmental policies provide Another essential feature of the book although this is not unique is the links provided between theory and empirical illustrations We hope that this will illustrate to our readers the practical usefulness but also the difficulties of applying economics to environmental problems In principle this book can be read by anyone interested in the subject matter without any formal education in economics However some background in microeconomic theory makes the reading easier
