Rational Application Developer for WebSphere Software V8 is the full function Eclipse 3.6 technology based development platform for developing Java™ Platform Standard Edition Version 6, Java SE 6 and Java Platform Enterprise Edition Version 6, Java EE 6 applications. Beyond this function, Rational Application Developer provides development tools for technologies such as OSGi, Service Component Architecture (SCA), Web 2.0 and XML. It has a focus on applications to be deployed to IBM WebSphere Application Server and IBM WebSphere Portal. Rational Application Developer provides integrated development tools for all development roles including web developers, Java developers, business analysts, architects and enterprise programmers. This IBM Redbooks publication is a programming guide that highlights the features and tooling included with Rational Application Developer V8.0.1. Many of the chapters provide working examples that demonstrate how to use the tooling to develop applications and achieve the benefits of visual and rapid application development. This publication is an update of Rational Application Developer V7.5 Programming Guide SG24-7672.

**Great Global Grid** Robert Marcus, 2002

Emerging Technology Strategies and the Great Global Grid. The next generation of the Internet will produce dramatic economic and social changes exceeding even the World Wide Web. Several emerging technologies are converging to create a Great Global Grid infrastructure where universal connectivity to large computing resources will be available for consumers and enterprises. The goal of this book is to provide a systematic survey of the full spectrum of Great Global Grid technologies from an enterprise viewpoint. The Great Global Grid. The range of technologies comprising the Great Global Grid is very wide. One of the main contributions of the book is to categorize these technologies in detail and to explain the dependencies among them. The technologies include Application Servers and Portals, Enterprise Application Integration and B2B Middleware, Web Services and XML Messaging, Peer to Peer Collaboration, Pervasive Computing, Middleware and Software Platforms, Distributed Resource Managers, Clusters and Grids, Global Grid Middleware, Conclusions for the Future, Emerging Technology Strategies. The book does not hype these technologies or their benefits. Section 1 of the book describes examples of past emerging technologies that failed to realize their initial vision. Based on the lessons learned from these experiences, a pragmatic technology evaluation template is created that includes Overview of the technology, Relationships to other technologies, Important technical and business trends, Specific applications, Industry and official standards, Vendor overview by application area, Leading implementation approaches, Advice on deployment, Future technical and business directions, Recommendations. Audience: The information collected in this book is not available from any other single source. The broad range of technologies, standards and vendors covered is necessary to understand the future enterprise applications of the Internet. The following groups should find the contents of this book especially valuable: Decision makers for the evaluation strategy and discussions of current products, standards and open issues; Developers and architects for the overview of many advanced software technologies and their relationships; Consultants for the industry analysis of vendors and business applications; Futurists for the trends and research that are the basis of the next generation Internet; Students for the
