Rowe,2018-02-13 Historian David E Rowe captures the rich tapestry of mathematical creativity in this collection of essays from the Years Ago column of *The Mathematical Intelligencer* With topics ranging from ancient Greek mathematics to modern relativistic cosmology this collection conveys the impetus and spirit of Rowe s various

and many faceted contributions to the history of mathematics Centered on the Göttingen mathematical tradition these stories illuminate important facets of mathematical activity often overlooked in other accounts Six sections place the essays in chronological and thematic order beginning with new introductions that contextualize each section The essays that follow recount episodes relating to the section's overall theme All of the essays in this collection with the exception of two appeared over the course of more than 30 years in The Mathematical Intelligencer Based largely on archival and primary sources these vignettes offer unusual insights into behind the scenes events Taken together they aim to show how Göttingen managed to attract an extraordinary array of talented individuals several of whom contributed to the development of a new mathematical culture during the first decades of the twentieth century

House Documents USA Congress House of Representatives, 1898 [Dynamical Systems](#) VIII V.I. Arnol'd, 2013-03-09 In the first volume of this survey Arnol'd et al 1988 hereafter cited as EMS 6 we acquainted the reader with the basic concepts and methods of the theory of singularities of smooth mappings and functions This theory has numerous applications in mathematics and physics here we begin describing these applications Nevertheless the present volume is essentially independent of the first one all of the concepts of singularity theory that we use are introduced in the course of the presentation and references to EMS 6 are confined to the citation of technical results Although our main goal is the presentation of already formulated theory the reader will also come upon some comparatively recent results apparently unknown even to specialists We point out some of these results 2 3 In the consideration of mappings from C into C in 3 6 of Chapter 1 we define the bifurcation diagram of such a mapping formulate a K n 1 theorem for the complements to the bifurcation diagrams of simple singularities give the definition of the Mond invariant N in the spirit of hunting for invariants and we draw the reader's attention to a method of constructing the image of a mapping from the corresponding function on a

manifold with boundary In 4 6 of the same chapter we introduce the concept of a versal deformation of a function with a nonisolated singularity in the class of functions whose critical sets are arbitrary complete intersections of fixed dimension
