Reproductive and Perinatal Epidemiology Statistics Germaine M. Buck Louis Director and Senior Investigator of the Division of Epidemiology, and Prevention Research (DESPR) Eunice Kennedy Shriver National Institute of Child Health & Human Development (NICHD) National Institutes of Health (NIH),Biostatistics Robert W. Platt Associate Professor

Departments of Pediatrics and of Epidemiology, and Occupational Health McGill University,2011-03-23 Population growth and global health disparities for many reproductive and perinatal outcomes are but a few of the pressing issues facing public health today Despite growing interest in the field formal training in reproductive and perinatal epidemiology remains limited with few available textbooks aimed at providing an overview of the field In response to this need faculty from the Eunice Kennedy Shriver National Institute of Child Health Human Development NICHD and CIHR s Institute of Human Development Child and Youth Health IHDCYH developed an intensive competitive Summer Institute in Reproductive and Perinatal Epidemiology The curriculum of this Summer Institute has been developed into a textbook to provide students and researchers with a working knowledge of the substantive and methodologic issues underlying reproductive and perinatal epidemiology Reproductive and Perinatal Epidemiology offers a core curriculum that addresses the epidemiology of major reproductive and perinatal outcomes From human fecundity to birth and neonatal outcomes the subject is approached from as international a perspective as possible and the unique methodologic issues underlying each outcome are discussed Developed by leading researchers in collaboration with their students in response to their needs and concerns this is the definitive textbook on the subject **ART and the Human Blastocyst** David K. Gardner,Michelle Lane,2012-12-06 The field of human artificial reproductive technology ART is continually advancing and has witnessed significant changes since the inception of Louise Brown in 1978 Though Louise Brown herself was conceived after the transfer of a blastocyst there remain significant confusion and debate regarding the stage at which the human embryo conceived in the laboratory should be replaced in the mother Developments in culture media formulations leading to the introduction of sequential media have brought the role of the blastocyst in human ART back into the spotlight It was due to this resurgence of interest in the niche of extended culture in human infertility treatment that the symposium on ART and the Human Blastocyst was held of this meeting within this volume bring to the forefront The proceedings the main issues raised with the transfer of embryos at the blastocyst stage It is evident from the chapters that follow that ART needs to be perceived as a continuum of procedures each one dependent on the preceding one and all equally as important as each other That is to say the development of a competent embryo is ultimately dependent on the quality of the gametes from which it was derived With regard to the oocyte this then places the emphasis on the physician to use a stimulation protocol that both produces quality oocytes and does not impair endometrial function Maintenance of gamete and embryo quality is the laboratory s role Ovulation Eli Y. New Mechanisms for Tissue-Selective Estrogen-Free Contraception H.B. Croxatto,R. Schürmann,U. Fuhrmann,I. Schellschmidt,2007-01-19 Combined oral contraceptives are the most convenient and accepted method of hormonal contraception Nevertheless the medical community and consumers constantly demand innovation additional benefits during use and lower hormonal load despite the high safety profile of available products At the Ernst Schering Research Foundation Workshop 52 new perspectives and mechanisms for tissue selective estrogen free contraception were discussed The aim of the workshop was to bring together experts in the field of molecular and pharmacodynamic action of progestins with clinicians and medical experts to discuss potential medical endpoints physiological reactions and bio marker useful describing the tissue selectivity and the contraceptive action of new progestins in different target organs A major factor for successful realization of these new concepts is a deeper understanding of local pharmacological responses to progestins in general and to new progestins in particular

Therapeutic Outcome of Endocrine Disorders Brian Stabler,Barry B. Bercu,2000 Changes in the allocation of healthcare resources have raised issues related to the efficacy and outcomes of medical therapy and how such factors may be measured The questions associated with the quality of life and functional capability of patients with chronic health conditions have been of special interest Endocrine disorders have the potential for disrupting the general health and well being of affected individuals and their families thus they warrant serious attention This symposium was convened in November 1997 at Palm Beach Gardens Florida to bring together medical behavioral and social scientists The meeting fostered the presentation and

discussion of the most current clinical research on the effects of various therapies on a wide range of endocrine disorders from diabetes to adrenal insufficiency and growth hormone deficiency. The participants all noted national and international experts in their fields focused their attention on both the biomedical value and effectiveness of treatment as well as on the impact such treatments have on psychological states such as mood and cognition. Many presentations specifically emphasized the quality of life (QOL) indicators that now regularly appear in many research protocols and reports. The pioneering work of two clinical researchers was a major highlight of the meeting and an Award of Recognition was presented to Robert Blizzard M D and John Money Ph D for their innovative and insightful work in pediatric endocrinology and psychosexual development.

Sex-Steroid Interactions with Growth Hormone Johannes D. Veldhuis, Andrea Giustina, 2012-12-06. Sex Steroid Interactions with Growth Hormone presents the proceedings of an international symposium held from October 22-25 in Naples, Florida. The proceedings provide new insights and concepts gained by molecular, cellular, and neuroendocrine research into mechanistic interactions of the reproductive and somatotrophic axes. Chapters include discussions of the impact of sex steroids on growth hormone secretion in both children and adults; sex steroids, growth hormone releasing factor, and somatostatin; how sex steroids modulate growth hormone action on target tissues; and differential effects of growth hormone secretagogues in men and women. This volume is designed for physicians, scientists, and other health professionals interested or trained in clinical and basic endocrinology, growth, or reproduction.

Essential IVF Jonathan van Blerkom, Linda Gregory, 2011-06-28. There is no clearer testament to the importance and efficacy of in vitro fertilization in the treatment of the infertile patient than the fact that over one million babies have been born since its clinical introduction in 1978. The success of this worldwide endeavor has evolved to treat some of the formerly most intractable forms of infertility and requires individuals with different skills and insights whose activities are often compartmentalized into clinical, laboratory, and research functions. The intent of Essential IVF is to present current issues in clinical IVF that encompass the varied activities of those engaged in this enterprise. By integrating clinical, basic research, and laboratory related aspects of human reproduction, readers with diverse interests should obtain a more complete understanding of the impact, importance, and interrelatedness of each in the progress of infertility treatment and an appreciation of whether emerging technologies will or should contribute to this progress in the near future. The topics selected for this volume include research that has begun to explain the origins of differential follicular, gamete, embryo, and uterine competence; and specific laboratory procedures and protocols that may have important clinical implications for the generation of developmentally viable embryos. Human embryo research over the past 25 years has not only confirmed that the developmental potential of each embryo is unique but more importantly demonstrated how genetic and nongenetic factors for sperm and oocyte determine embryo competence well before fertilization. Several chapters deal with the origins of normal and compromised gametes and how those with high competence can be identified and isolated for fertilization.
