Emissions Trading Programs:

Emissions Trading Thomas H. Tietenberg, 2010-09-30 First published in 1985 Emissions Trading was a comprehensive review of the first large scale attempt to use economic incentives in environmental policy in the U S and of the empirical and theoretical research on which this approach is based Since its publication it has consistently been one of the most widely cited works in the tradable permits literature The second edition of this classic study of pollution reform considers how the use of transferable permits to control pollution has evolved looks at how these programs have been implemented in the U S and internationally and offers an objective evaluation of the resulting successes failures and lessons learned over the last twenty five years

Emissions Trading Programs Thomas H. Tietenberg, Tom Tietenberg, 2001 A comprehensive collection of leading articles important in the development of the use of emissions trading to control air pollution from its earliest implementation in the USA in 1976 to its application to global warming in the Kyoto Protocol Each volume offers an introduction by the editor Tom Tietenberg presenting a history of the evolution of the field as well as a guide to the collected papers that follow Volume One contains the theoretical and empirical work that underpinned the development of this particular policy instrument as well as a discussion of some of the major design issues Volume Two focuses on

implementation and presents examples of the major programs now in existence **Greenhouse Gas Emissions Trading and Project-based Mechanisms** OECD, 2004-01-19 This book presents a selection of papers from an international workshop co sponsored by the OECD and Concerted Action on Tradeable Emissions Permits CATEP to discuss key research and policy issues relating to the design and implementation of these instruments

Emissions Trading for Climate Policy Bernd Hansjürgens, 2005-07-28 The 1997 Kyoto Conference introduced emissions trading as a policy instrument for climate protection Bringing together scholars in the fields of economics political science and law this book which was originally published in 2005 provides a description analysis and evaluation of different aspects of emissions trading as an instrument to control greenhouse gases The authors analyse theoretical aspects of regulatory instruments for climate policy provide an overview of US experience with market based instruments draw lessons from trading schemes for the control of greenhouse gases and discuss options for emissions trading in climate policy They also highlight the background of climate policy and instrument choice in the US and Europe and the foundation of systems in Europe particularly the EU s directive for a CO2 emissions trading system

Emissions Trading Ralf Antes, Bernd Hansjürgens, Peter Letmathe, 2008-07-01 Emissions trading challenges the management of companies in an entirely new manner Not only does it like other market based environmental policy instruments allow for a bigger flexibility in management decisions concerning emission issues More importantly it shifts the mode of governance of environmental policy from hierarchy to market But how is this change reflected in management processes decisions and organizational structures The contributions in this book discuss the theoretical implications of different institutional designs of emissions trading schemes review schemes that have been implemented in

the US and Europe and evaluate the range of investment decisions and corporate strategies which have resulted from the new policy framework *Environmental Commodities Markets and Emissions Trading* Blas Luis Pérez Henríquez, 2013

Market based solutions to environmental problems offer great promise but require complex public policies that take into account the many institutional factors necessary for the market to work and that guard against the social forces that can derail good public policies Using insights about markets from the new institutional economics this book sheds light on the institutional history of the emissions trading concept as it has evolved across different contexts It makes accessible the policy design and practical implementation aspects of a key tool for fighting climate change emissions trading systems ETS for environmental control Blas Luis Pérez Henríquez analyzes past market based environmental programs to extract lessons for the future of ETS He follows the development of the emissions trading concept as it evolved in the United States and was later applied in the multinational European Emissions Trading System and in sub national programs in the United States such as the Regional Greenhouse Gas Initiative RGGI and California's ETS This ex post evaluation of an ETS as it evolves in real time in the real world provides a valuable supplement to what is already known from theoretical arguments and simulation studies about the advantages and disadvantages of the market strategy Political cycles and political debate over the use of markets for environmental control make any form of climate policy extremely contentious Pérez Henríquez argues that despite ideological disagreements the ETS approach or more popularly cap and trade policy design remains the best hope for a cost effective policy to reduce GHG emissions around the world

Study of Atmospheric Emission Trading Programs in the United States Barakat & Chamberlin, 1991 *Emissions Trading Schemes and Their Linking* Asian Development Bank, 2016-04-01

Asia and the Pacific has achieved rapid economic expansion in the recent years and has become a major source of greenhouse gas GHG emissions With more than half of the world's population and high rates of economic growth the region is especially vulnerable to the effects of climate change and therefore must play its part in cutting GHG emissions The Paris Agreement adopted last December 2015 at the United Nations Framework Convention on Climate Change COP21 aims to restrict global warming to well below 2°C above preindustrial levels and to pursue efforts to reach 1.5°C which is especially relevant to Asia and the Pacific region given its vulnerability This knowledge product highlights how robust policies on emissions trading systems ETS can be important tools in reducing GHG emissions in a cost effective manner as well as supporting the mobilization of finance together with deployment of innovative technologies There are currently 17 ETSs in place in four continents and account for nearly 40% of global gross domestic product In Asia and the Pacific region there are 11 systems operating with more being planned The growing wealth of experience on ETSs can be valuable to support DMCs that are planning and designing new systems of their own This knowledge product summarizes some of the most significant learning experiences to date and discusses some of the solutions to alleviate challenges that have been faced It also examines the possibilities for future linked carbon markets in the region

United States. Congress. Joint Economic Committee,1997 *Competition, Choice, and Incentives in Government Programs* Albert Morales,John M. Kamensky,2006 Since the 1980s the language used around market based government has muddled its meaning and polarized its proponents and critics making the topic politicized and controversial Competition Choice and Incentives in Government Programs hopes to reframe competing views of market based government so it is seen not as an ideology but rather as a fact based set of approaches for managing government services and programs more efficiently and effectively

HC 739 - Linking Emissions Trading Systems Great Britain. Parliament. House of Commons. Energy and Climate Change Committee,2015 Carbon pricing is a necessary element in spurring climate change mitigation action In this report it s argued that emissions trading as an established and well recognised policy instrument for controlling greenhouse gas emissions is increasingly popular and spreading around the world As they develop emissions trading systems should be designed so that they are compatible with each other Aligning design elements early on will help improve the prospects of linking different systems in future and therefore maximise opportunities for cost effective emissions reductions As the world s oldest and largest market the EU Emission Trading System will play a critical role in facilitating linking between different markets Before it can do this however it must be seen as a credible market The issue of surplus allowances must be addressed urgently and there should be moves to remove these from the system as soon as possible Any new climate agreement must crucially allow parties to meet their Intended Nationally Determined Contribution s INDCs by transferring parts of their contributions to other parties and financing emissions reduction activities in other countries The use of carbon markets will greatly improve the prospects of keeping global average temperatures below 2 C Any agreement reached at the UNFCCC COP 21 in Paris at the end of 2015 should promote the use of carbon markets and facilitate the future linking of emissions trading systems The UNFCCC could also play a critical role in providing basic standards including monitoring reporting and verification *S. 981, the Regulatory Improvement Act of 1997* United States. Congress. Senate. Committee on Governmental Affairs,1998 Emissions, Pollutants and Environmental Policy in China Bo Miao,2013-09-02 As the world s biggest polluter the environmental challenges that China faces in controlling its airborne emissions are crucial not only to its own population in terms of tackling the severe domestic air pollution but also to the planet as it faces calls from the international community to accept its responsibilities in cutting greenhouse gases Deteriorating air quality clearly shows that

China's current environmental regime is unsuited to either tackle the rampant domestic air pollution or contribute fairly to international climate action. As such, this book explores the feasibility of applying a national emissions trading system to control multiple air pollutants in China. It begins with an outline of the existing emissions management system and goes on to explore whether a national emissions trading system is a viable choice to combat China's conventional air pollutants. To this end, there is an in-depth analysis of the two pilot sulphur dioxide emissions trading programs in Taiyuan and Jiangsu, as well as an examination of emissions trading schemes in the US and EU. Finally, the book discusses the key design elements of a multi-pollutant cap and trade scheme that addresses both conventional air pollutants and greenhouse gases. This book will be of great interest to students and scholars interested in the fields of environmental studies, Chinese politics, and environmental law. It will also be invaluable to policy makers in the field.

An Evaluation of Cap-and-trade Programs for Reducing U.S. Carbon Emissions, 2001. This Congressional Budget Office (CBO) study, written by Terry Dinan, prepared at the request of the Senate Committee on Environment and Public Works, examines four proposals. All are variants of a cap and trade program in which policymakers would set a mandatory cap on carbon emissions and allow businesses to trade rights or allowances to those emissions.

Carbon Pricing, Growth and the Environment. Lawrence A. Kreiser, Ana Yábar Sterling, Pedro Manuel Herrera Molina, Janet E. Milne, Hope Ashiabor, 2012-01-01. The scope, depth, and persistence with which this book explores carbon pricing is admirable, reflecting that despite political reluctance, it is a topic in all parts of the world.

_ Mikael Skou Andersen, Aarhus University, Denmark, and European Environment Agency. Environmental taxation and emissions trading continue to be high on the public policy agenda in many countries, and this is another welcome and very interesting volume in the Critical Issues in Environmental Taxation series that presents new ideas and evidence on these subjects from a wide range of countries and a variety of perspectives.

_ Paul Ekins, University College London, UK. This original and timely volume provides unique insights and analysis on the pressing question of how to achieve environmental sustainability while fostering economic growth. The emphasis of the book lies in finding critical solutions to global climate change, including chapters on environmental fiscal reform and unemployment in Spain, EU structural and cohesion policy, and sustainable development, ecological tax reform in Europe and Asia, Australia's carbon pricing mechanism, and many other timely topics. This insightful volume will appeal to policy makers in government, as well as academics and students in environmental law, environmental economics, and environmental sustainability.
