Seeing Between the Pixels Christine

Strothotte,Thomas Strothotte,2012-12-06 Pictures are at the heart of how we communicate with computers emblematic of our current fascination with multimedia and web based computing Nevertheless most of us know far less about pictures and the way in which they work than we know about the text that often accompanies them In an attempt to understand pictures perhaps the most fundamental question we can ask is What is a picture What is it that objects as diverse as icons bar charts paintings and photographs have in common that makes us refer to all of them as pictures And what is it about pictures that convinces us to use them instead of or in addition to text We often talk about how pictures depict things But even the process of depiction seems to differ from one picture to another On a computer we may use a paint system to guide a virtual brush over the screen a video camera to capture a live image a spread sheet to automatically generate a corresponding bar chart or a rendering system that models the interactions of synthetic lights objects and cameras Is there some underlying property that these processes all share Computer scientists are used to thinking of pictures in terms of their representation an array of pixels a list or hierarchy of graphics primitives or even a program written in a language such as PostScript Dictionary Catalog of the Department Library United States.
