Embedded Linux Craig Hollabaugh, 2002 A guide to using Linux on embedded platforms for interfacing to the real world Embedded Linux is one of the first books available that teaches readers development and implementation of interfacing applications on an Embedded Linux platform

Embedded Linux Craig Hollabaugh, 2002 *Embedded Systems Design with Platform FPGAs* Ronald Sass, Andrew G. Schmidt, 2010-09-10 Embedded Systems Design with Platform FPGAs introduces professional engineers and students alike to system development using Platform FPGAs The focus is on embedded systems but it also serves as a general guide to building custom computing systems The text describes the fundamental technology in terms of hardware software and a set of principles to guide the development of Platform FPGA systems The goal is to show how to systematically and creatively apply these principles to the construction of application specific embedded system architectures There is a strong focus on using free and open source software to increase productivity Each chapter is organized into two parts The white pages describe concepts principles and general knowledge The gray pages provide a technical rendition of the main issues of the chapter and show the concepts applied in practice This includes step by step details for a specific development board and tool chain so that the reader can carry out the same steps on their own Rather than try to demonstrate the concepts on a broad set of tools and boards the text uses a single set of tools Xilinx Platform Studio Linux and GNU throughout and uses a single developer board Xilinx ML 510 for the examples Explains how to use the Platform FPGA to meet complex design requirements and improve product performance Presents both fundamental concepts together with pragmatic step by step instructions for building a system on a Platform FPGA Includes detailed case studies extended real world examples and lab exercises

Embedded and Ubiquitous Computing Laurence T. Yang, Minyi Guo, Guang R. Gao, Niraj K. Jha, 2004-07-30 Welcome to the proceedings of the 2004 International Conference on Embedded and Ubiquitous Computing EUC 2004 which was held in Aizu Wakamatsu City Japan 25 27 August 2004 Embedded and ubiquitous computing are emerging rapidly as exciting new paradigms and disciplines to provide computing and communication services all the time everywhere Its systems are now invading every aspect of life to the point that they are disappearing inside all sorts of appliances or can be worn unobtrusively as part of clothing and jewelry etc This emergence is a natural outcome of research and technological advances in embedded systems pervasive computing and communications wireless networks mobile computing distributed computing and agent technologies etc Its explosive impact on academia industry government and daily life can be compared to that of electric motors over the past century but promises to revolutionize life much more profoundly than elevators electric motors or even personal computer evolution ever did The EUC 2004 conference provided a forum for engineers and scientists in academia industry and government to address all the resulting profound challenges including technical safety social legal political and economic issues and to present and discuss their ideas results work in progress and experience on all aspects of embedded and ubiquitous computing There was a very

Design for Embedded Image Processing on FPGAs Donald G. Bailey, 2011-06-13 Dr Donald Bailey starts with introductory material considering the problem of embedded image processing and how some of the issues may be solved using parallel hardware solutions Field programmable gate arrays FPGAs are introduced as a technology that provides flexible fine grained hardware that can readily exploit parallelism within many image processing algorithms A brief review of FPGA programming languages provides the link between a software mindset normally associated with image processing algorithms and the hardware mindset required for efficient utilization of a parallel hardware design The design process for implementing an image processing algorithm on an FPGA is compared with that for a conventional software implementation with the key differences highlighted Particular attention is given to the techniques for mapping an algorithm onto an FPGA implementation considering timing memory bandwidth and resource constraints and efficient hardware computational techniques Extensive coverage is given of a range of low and intermediate level image processing operations discussing efficient implementations and how these may vary according to the application The techniques are illustrated with several example applications or case studies from projects or applications he has been involved with Issues such as interfacing between the FPGA and peripheral devices are covered briefly as is designing the system in such a way that it can be more readily debugged and tuned Provides a bridge between algorithms and hardware Demonstrates how to avoid many of the potential pitfalls Offers practical recommendations and solutions Illustrates several real world applications and case studies Allows those with software backgrounds to understand efficient hardware implementation
