*Embodied Conversational Agents* Justine Cassell, 2000 This book describes research in all aspects of the design implementation and evaluation of embodied conversational agents as well as details of specific working systems Embodied conversational agents are computer generated cartoonlike characters that demonstrate many of the same properties as humans in face to face conversation including the ability to produce and respond to verbal and nonverbal communication They constitute a type of a multimodal interface where the modalities are those natural to human conversation speech facial displays hand gestures and body stance b software agent insofar as they represent the computer in an interaction with a human or represent their human users in a computational environment as avatars for example and c dialogue system where both verbal and nonverbal devices advance and regulate the dialogue between the user and the computer With an embodied conversational agent the visual dimension of interacting with an animated character on a screen plays an intrinsic role Not just pretty pictures the graphics display visual features of conversation in the same way that the face and hands do in face to face conversation among humans This book describes research in all aspects of the design implementation and evaluation of embodied conversational agents as well as details of specific working systems Many of the chapters are written by multidisciplinary teams of psychologists linguists computer scientists artists and researchers in interface design The authors include Elisabeth Andre Norm Badler Gene Ball Justine Cassell Elizabeth Churchill James Lester Dominic Massaro Cliff Nass Sharon Oviatt Isabella Poggi Jeff Rickel and Greg Sanders Handbook of Virtual Humans Nadia

Zsófia Ruttkay, Catherine Pelachaud, 2006-02-19 Embodied conversational agents ECAs are autonomous software entities with human like appearance and communication skills These agents can take on a number of different roles for example as an assistant tutor information provider or customer service agent They may also simply represent or entertain a user The precise nature and benefits of different characteristics of ECAs requires careful investigation Questions range from the

function of an eyebrow raise to mechanisms for assessing and improving ECA trustworthiness This book will help experts and designers in the specification and development of applications incorporating ECAs Part 1 provides guidelines for evaluation methodologies and the identification of design and evaluation parameters Part 2 demonstrates the importance of considering the user's perspective and interaction experience Part 3 addresses issues in fine tuning design parameters of ECAs and verifying the perceived effect Finally in Part 4 lessons learned from a number of application case studies are presented The book is intended for both ECA researchers in academia and industry and developers and designers interested in applying the technology

Modelling Machine Emotions for Realizing Intelligence Toyoaki Nishida, Colette Faucher, 2010-06-21 Emotion connects the thought to the body which is a magnificent biological vice for sensing and affecting the world The thought controls the body through emotions The body affects the thought through emotions Through this mechanism the thought allows the agent to behave intelligently in the complex world filled with a huge amount of dynamic information The emotion maps a flux of information into a space which the agent is familiar with enabling her him to associate ongoing events with past experiences which help to reduce complexity by providing with a nominal solution Recent findings in brain science suggest that mirror neurons map visual signals into motor signals for the body This mechanism might permit one to experience the emotion of the other agent just by feeling the motor signals caused by mirror neurons as a result of visual stimuli caused by the other agent's emotional behaviors In particular it might play a significant role in invoking empathy in a social situation It may not be hard to think about what might happen to emotionless machines The emotionless machines may not be able to accumulate experiences to avoid serious failures They may not be able to communicate with the humans in an empathetic way
