Emergence The Connected Lives Of Ants Brains Cities And Software:

Emergence Steven Johnson,2001 In the tradition of Being Digital and The Tipping Point comes a groundbreaking and engaging book that makes sense of the cutting edge theory of emergence and demonstrates its relevance in today s world

Emergence Steven Johnson,2001 Emergence is what happens when an interconnected system of relatively simple elements self organizes to form more intelligent more adaptive higher level behavior It s a bottom up model rather than being engineered by a general or a master planner emergence begins at the ground level Systems that at first glance seem vastly different ant colonies human brains cities immune systems all turn out to follow the rules of emergence In each of these systems agents residing on one scale start producing behavior that lies a scale above them ants create colonies urbanites create neighborhoods Author Steven Johnson takes readers on an eye opening intellectual journey from the discovery of emergence to its applications He introduces us to our everyday surroundings offering surprising examples of feedback self organization and adaptive learning Drawing upon evolutionary theory urban studies neuroscience and computer games Emergence is a guidebook to one of the key components of twenty first century culture Until recently Johnson explains the disparate philosophers of emergence have worked to interpret the world But today they are starting to change it This book is the riveting story of that change and what it means for the future *Beem Raju Pookottil,2013-02-01*

Biological Emergence Based Evolutionary Mechanism How species direct their own evolution *The Cognitive Science of Religion* James A. Van Slyke,2016-03-23 The cognitive science of religion is a relatively new academic field in the study of the origins and causes of religious belief and behaviour The focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs However many theologians and religious scholars are concerned that this perspective will reduce and replace explanations based in religious traditions beliefs and values This book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion **The Urbanism Reader** Stefan Al,Tom Verebes,2025-02-06 Positioning design at the center of the debate The Urbanism Reader brings together classic and contemporary readings to help designers understand the complexities of cities and urban design in the 21st century The selection of readings presented here is uniquely tailored to a design perspective for architects and urban designers balancing social issues in urbanism with a clear focus on foregrounding design as an instrument for change in cities and examining the outcomes and challenges of recent design theories design methods and technologies in the built urban environment Covering today s most urgent issues 45 texts explore key topics in urbanism from digital design technologies to smart cities from the ongoing ecological crisis to public health and the impact of Covid 19 and from emergence and informality to economic inequity in global cities Chapters cover cultural issues including diversity indigenous knowledge decolonization social justice and inclusion alongside

technological developments while a final chapter speculates on the future of urbanism through readings in AI virtual reality and the frontiers of current thinking in architecture and urban design The extracts are grouped by theme each with an introduction to the historical contexts and guiding paradigms helping design students researchers and professionals to make sense of the diverse field of theory and practice in the past present and future of global urbanism On Being Certain Robert Alan Burton,2009-03-17 Neurologist Robert Burton challenges common notions about how people think about what they know demonstrating how the feeling of certainty comes from a place beyond knowledge and control and is a mental sensation not evidence of fact **Health Information Science** Agma Traina,Hua Wang,Yong Zhang,Siuly Siuly,Rui Zhou,Lu Chen,2022-10-25 This book constitutes the refereed proceedings of the 11th International Conference on Health Information Science HIS 2022 held in Virtual Event during October 28 30 2022 The 20 full papers and 9 short papers included in this book were carefully reviewed and selected from 54 submissions They were organized in topical sections as follows applications of health and medical data health and medical data processing health and medical data mining via graph based approaches and health and medical data classification *The Johns Hopkins Guide to Digital Media* Marie-Laure Ryan,Lori Emerson,Benjamin J. Robertson,2014-04-15 The first systematic comprehensive reference covering the ideas genres and concepts behind digital media The study of what is collectively labeled New Media the cultural and artistic practices made possible by digital technology has become one of the most vibrant areas of scholarly activity and is rapidly turning into an established academic field with many universities now offering it as a major The Johns Hopkins Guide to Digital Media is the first comprehensive reference work to which teachers students and the curious can quickly turn for reliable information on the key terms and concepts of the field The contributors present entries on nearly 150 ideas genres and theoretical concepts that have allowed digital media to produce some of the most innovative intellectual artistic and social practices of our time The result is an easy to consult reference for digital media scholars or anyone wishing to become familiar with this fast developing field **Doc-Humanity** Maurizio Ferraris,2022-09-12 However you view the present time it is a new century a new world and also a new humanity in fact humanity is not something that was ever defined once and for all but remains an open project For several decades we have been witnessing a revolution However unlike the political and ideological revolutions that took place around the First World War this is a technological and much more radical one that does not depend on people s beliefs but rather on the tireless labour of machines The rise of automation has brought about a revelation of something that had hitherto remained hidden in the workshops of homo faber That is there are very few functions apart from consumption where a machine cannot replace a human being be these material or spiritual machines need energy but they can also do without it whereas humans die if deprived of it or one can imagine a machine producing symphonies but not enjoying them So while human beings are still needed their roles and scopes have to be reconsidered Workers may be superfluous but humans are still needed including those who until recently only recognised themselves as

producers The exclusion of workers from production does not discount humans being able to produce value in the form of consumption Recognising this will enable us to conceive the Webfare a new digital system that will teach us to find new names and new forms more tolerance and room for traditional human needs Above all it will teach us how to transform the time given to us by automation into an opportunity for progress

City Design Jonathan Barnett, 2016-01-08 City Design describes the history and current practice of the four most widely accepted approaches to city design the Modernist city of towers and highways that beginning in the 1920s has come to dominate urban development worldwide but is criticized as mechanical and soul less the Traditional organization of cities as streets and public places scorned by the modernists but being revived today for its human scale Green city design whose history can be traced back thousands of years in Asia but is becoming increasingly important everywhere as sustainability and the preservation of the planet are recognized as basic issues and finally Systems city design which includes infrastructure and development regulation but also includes computer aided techniques which give designers new tools for managing the complexity of cities This new revised edition of City Design includes a larger format and improved interior design allowing for better image quality The author has also included wider global coverage and context with more international examples throughout as well as new coverage on designing for informal settlements and new research conclusions about the immediacy of sea level rise and other climate change issues that affect cities which sharpen the need for design measures discussed in the book Authoritative yet accessible City Design covers complicated issues of theory and practice and its approach is objective and inclusive This is a comprehensive text on city design ideal for planners landscape architects urban designers and those who want to understand how to improve cities

The Age of Intelligent Cities Nicos Komninos, 2014-08-27 This book concludes a trilogy that began with *Intelligent Cities* Innovation Knowledge Systems and digital spaces Routledge 2002 and *Intelligent Cities and Globalisation of Innovation Networks* Routledge 2008 Together these books examine intelligent cities as environments of innovation and collaborative problem solving In this final book the focus is on planning strategy and governance of intelligent cities Divided into three parts each section elaborates upon complementary aspects of intelligent city strategy and planning Part I is about the drivers and architectures of the spatial intelligence of cities while Part II turns to planning processes and discusses top down and bottom up planning for intelligent cities Cities such as Amsterdam Manchester Stockholm and Helsinki are examples of cities that have used bottom up planning through the gradual implementation of successive initiatives for regeneration On the other hand Living PlanIT Neapolis in Cyprus and Saudi Arabia intelligent cities have started with the top down approach setting up urban operating systems and common central platforms Part III focuses on intelligent city strategies how cities should manage the drivers of spatial intelligence create smart environments mobilise communities and offer new solutions to address city problems Main findings of the book are related to a series of models which capture fundamental aspects of intelligent cities making and operation These models consider structure function planning strategies toward intelligent

environments and a model of governance based on mobilisation of communities knowledge architectures and innovation cycles Self-Organizing Architectures Danny Weyns, Sam Malek, Rogério de Lemos, Jesper Andersson, 2010-07-17 This book contains the refereed post conference proceedings of the First International Self Organizing Architectures Workshop SOAR in Cambridge UK in September 2009 The book includes 9 revised papers which were selected from 17 submissions of the workshop as well as 4 invited papers The papers cover a broad range of topics related to self organizing architectures including self adaptive architectures decentralized architectures nature inspired approaches and learning approaches

Empowerment on an Unstable Planet Daniel C. Taylor, Carl E. Taylor, Jesse O. and the fundamental differences between polarizing philosophical traditions In a further step the book draws on the Darwinian principle that our cognitive apparatus is shaped by the environment in which it evolved to argue that human bilaterality mirrors the fundamental hylomorphic relation between formal organization and material components that constitutes physical nature itself The logical division between holistic and analytic categories thereby offers a principled basis for a metaphilosophy

Cybernetic Revelation J.D. Casten, 2012-11-20 Cybernetic Revelation explores the dual philosophical histories of deconstruction and artificial intelligence tracing the development of concepts like the logos and the notion of modeling the mind technologically from pre history to contemporary thinkers like Slavoj i ek Steven Pinker Bernard Stiegler and Daniel C Dennett The writing is clear and accessible throughout yet the text probes deeply into major philosophers seen by JD Casten as conceptual engineers Philosophers covered include Anaximander Heraclitus Parmenides Plato Aristotle Philo Augustine Shakespeare Descartes Spinoza Leibniz Locke Berkeley Hume Kant Hegel Nietzsche Freud Jung Joyce Dewey Wittgenstein Heidegger Adorno Benjamin Derrida Chomsky i ek Pinker Dennett Hofstadter Stiegler more with special chapters on AI s history Complexity Deconstructing AI Aesthetics Consciousness more

Active Matter Skylar Tibbits, 2017-09-29 The first book on active matter an emerging field focused on programming physical materials to assemble themselves transform autonomously and react to information The past few decades brought a revolution in computer software and hardware today we are on the cusp of a materials revolution If yesterday we programmed computers and other machines today we program matter itself This has created new capabilities in design computing and fabrication which allow us to program proteins and bacteria to generate self transforming wood products and architectural details and to create clothing from intelligent textiles that grow themselves This book offers essays and sample projects from the front lines of the emerging field of active matter Active matter and programmable materials are at the intersection of science art design and engineering with applications in fields from biology and computer science to architecture and fashion These essays contextualize current work and explore recent research Sample projects generously illustrated in color show the range of possibilities envisioned by their makers Contributors explore the design of active material at scales from nano to micro kilo and even planetary They investigate processes of self assembly at a microscopic level test new materials that can sense and actuate themselves and examine the potential of active matter in the built environment and in living and artificial systems Active Matter is an essential guide to a field that could shape the future of design

The City As A Tangled Bank Sir Terry Farrell, 2014-02-19 Here Sir Terry Farrell who has built an international career as an architect planner encourages other planners and architects to follow the biologists look at learn from and indeed admire the nature of the forces that drive the change and then with humility and respect work with them to nudge anticipate and prepare for where it takes us Searching for patterns within the apparent turbulence and complexity he analyses the notions of urban design and urban evolution and examines whether or not they need necessarily be seen as opposing one another The first two chapters discuss emergence as an idea in a biological and architectural context as well as the distinction between urban design and planning in both education and practice and the impact of other fields such as landscape design Seven further chapters examine a range of themes embracing the importance of chain reactions in the progress of urban engineering the character of habitation layering taste and context adaptation and conversion the advocacy of the architect planner and the effects of digital technology on city evolution Farrell brings his considerable experience in practice to bear elucidating his thoughts with examples from cities across the world including Beijing Hong Kong London New York and Paris

Contemporary Perspectives on Jane Jacobs Dirk Schubert, 2016-05-13 Jane Jacobs's famous book *The Death and Life of Great American Cities* 1961 has challenged the discipline of urban planning and led to a paradigm shift Controversial in the 1960s most of her ideas became generally accepted within a decade or so after publication not only in North America but worldwide as the articles in this volume demonstrate Based on cross disciplinary and transnational approaches this book offers new insights into her complex and often contrarian way of thinking as well as analyses of her impact on urban planning theory and the consequences for planning practice Now more than 50 years after the initial publication in a period of rapid globalisation and deregulated approaches in planning new challenges arise The contributions in this book argue that it is not possible simply to follow Jane Jacobs's ideas to the letter but instead it is necessary to contextualize them to look for relevant lessons for cities and planners and critically to re evaluate why and how some of her ideas might be updated Bringing together an international team of scholars and writers this volume develops conclusions based on new research as to how her work can be re interpreted under different circumstances and utilized in the current debate about the proclaimed millennium of the city the 21st century
