Logic Of The Science And The Humanities:

The Logic of the Sciences and the Humanities Filmer Stuart Cuckow Northrop,1959 The author discusses the application of logic to the diverse scientific methods of the several natural and social sciences and to the humanities **The Logic of the Humanities** Ernst Cassirer,1961 Ernst Cassirer one of the foremost philosophers of this century analyzes the basic concepts that underlie our art our knowledge of history and our disciplined knowledge of human nature This philosophy of culture is a key to deeper understanding of the forms of art and aesthetic expression **The Logic of the Sciences and the Humanities** Filmer S. C. Northrop,1957 **The Logic of the Sciences and the Humanities** Filmer S. C. Northrop,1971 Handbook of Epistemology I. Niiniluoto,Matti Sintonen,Jan Wolenski,2004-03-31 The twenty eight essays in this Handbook all by leading experts in the field provide the most extensive treatment of various epistemological problems supplemented by a historical account of this field The entries are self contained and substantial contributions to topics such as the sources of knowledge and belief knowledge acquisition and truth and justification There are extensive essays on knowledge in specific fields the sciences mathematics the humanities and the social sciences religion and language Special attention is paid to current discussions on evolutionary epistemology relativism the relation between epistemology and cognitive science sociology of knowledge epistemic logic knowledge and art and feminist epistemology This collection is a must have for anybody interested in human knowledge and its fortunes and misfortunes **Educating Citizen Designers in South Africa** Elmarie Costandius,Herman Botes,2018-09-07 Educating Citizen Designers in South Africa is the first book of its kind to appear in post apartheid South Africa and it is therefore both overdue and extremely welcome The book aims at sharing critical citizenship design teaching and learning pedagogies by including contributions from a range of design educators and one student who work in different design disciplines such as architecture graphic and product design Critical citizenship education is explicated in relation to a range of theories and new and existing models Numerous contemporary case studies and examples of design projects from a range of South African Higher Education Institutions are included As such a variety of perspectives emerge including the consensual where the aim of critical citizenship education is viewed as promoting social justice shared values and critical thinking to the conflicting where critiques are levelled against conceptions of critical citizenship education Contentious contesting and contradictory views are inevitable and necessary given the South African context as it is only in open debate that the one point of agreement among the authors the need for social change can be worked towards Prof Deirdre Pretorius Univeristy of Johannesburg *Levels of Organic Life and the Human* Helmuth Plessner,2021-05-20 The groundbreaking classic of twentieth century German philosophy now available in English with an introduction by J M Bernstein Helmuth Plessner s Levels of Organic Life and the Human draws on phenomenological biological and social scientific sources to offer a systematic account of nature life and human existence The book considers non living nature plants non human animals and human beings a sequence of increasingly complex modes of boundary

dynamics simply put interactions between a thing's insides and the surrounding world. Living things are classed and analyzed by their positionality or orientation to and within an environment. According to Plessner's radical view, the human form of life is excentric; that is, the relation between body and environment is something to which humans themselves are positioned and can take a position. This excentric positionality enables human beings to take a stand outside the boundaries of their own body, a possibility with significant implications for knowledge, culture, religion, and technology. A powerful and sophisticated account of embodiment, the *Levels* shows, with reference both to science and to philosophy, how life can be seen on its own terms to establish its own boundaries and how, from the standpoint of life, the human establishes itself in relation to the nonhuman. As such, the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal, posthumanism, the material turn, and the biology and sociology of cognition.

Conscience and Cognition in Social Research Zhang Qingxiong, 2023-04-07. This book is a critical examination of the different roles of conscience and cognition in social research in China and the West, exploring how the two traditions can enrich each other and help societies navigate through the complex intellectual and moral crises of our time. Drawing on a rich array of primary and secondary sources, this title traces the development of the Confucian conception of conscience from Confucius and Mencius to Xiong Shili and Mou Zongsan, two representatives of Neo-Confucianism. This primacy of a moral sense is compared and contrasted with the tension within the Western culture between strains that place a premium on understanding and a deep commitment to the search for meaning in such philosophers as Habermas and Heidegger. The author explicates why such a commitment is essential to social research and how the focus on instrumental rationality that has defined modernity may be corrected by recentring the role of conscience on intellectual inquiry in general. To that end, both Chinese and Western cultures have plenty to offer both in terms of substantive insights and research methodologies. The book will be a crucial reference for scholars and students interested in Western philosophy, comparative philosophy, and Chinese philosophy.

Pluralism in Management Eirik Irgens, 2011-05-09. In *Pluralism in Management*, author Eirik Irgens utilizes Ernst Cassirer's pluralistic philosophy in order to investigate how different but connected forms of knowing, including art, myth, religion, science, and history, may help us become better organizational scholars and management educators, forcing us to consider elements outside of a purely practical existence. Revitalizing Cassirer's almost forgotten philosophy, the book illustrates the value of philosophical application to organizational study.
