are here but others are from students co workers and other colleagues The intention of the conference was to look forward and to see the directions currently being pursued in the development of work by or with Nerode Here is a brief summary of the contents of this book We give a retrospective view of Nerode s work A number of specific areas are readily discerned recursive equivalence types recursive algebra and model theory the theory of Turing degrees and r e sets polynomial time computability and computer science Nerode began with automata theory and has also taken a keen interest in the history of mathematics All these areas are represented The one area missing is Nerode s applied mathematical work relating to the environment Kozen s paper builds on Nerode s early work on automata Recursive equivalence types are covered by Dekker and Barback the latter using directly a fundamental metatheorem of Nerode Recursive algebra is treated by Ge Richards group representations Recursive model theory is the subject of papers by Hird Moses and Khoussainov Dadajonov while a combinatorial problem in recursive model theory is discussed in Cherlin Martin s paper Cenzer presents a paper on recursive dynamics Modular Ontologies Heiner Stuckenschmidt,Christine Parent,Stefano Spaccapietra,2009-05-17 This book constitutes a collection of research achievements mature enough to provide a firm and reliable basis on modular ontologies It discusses the recent concepts theories and techniques for knowledge modularization **Logic-Based Artificial**

Intelligence Jack Minker,2012-12-06 The use of mathematical logic as a formalism for artificial intelligence was recognized by John McCarthy in 1959 in his paper on Programs with Common Sense In a series of papers in the 1960 s he expanded upon these ideas and continues to do so to this date It is now 41 years since the idea of using a formal mechanism for AI arose It is therefore appropriate to consider some of the research applications and implementations that have resulted from this idea In early 1995 John McCarthy suggested to me that we have a workshop on Logic Based Artificial Intelligence LBAI In June 1999 the Workshop on Logic Based Artificial Intelligence was held as a consequence of McCarthy s suggestion The workshop came about with the support of Ephraim Glinert of the National Science Foundation IIS 9S2013S the American Association for Artificial Intelligence who provided support for graduate students to attend and Joseph JaJa Director of the University of Maryland Institute for Advanced Computer Studies who provided both manpower and financial support and the Department of Computer Science We are grateful for their support This book consists of refereed papers based on presentations made at the Workshop Not all of the Workshop participants were able to contribute papers for the book The common theme of papers at the workshop and in this book is the use of logic as a formalism to solve problems in AI

Dynamic Tractable Reasoning Holger Andreas,2020-03-27 This book aims to lay bare the logical foundations of tractable reasoning It draws on Marvin Minsky s seminal work on frames which has been highly influential in computer science and to a lesser extent in cognitive science Only very few people have explored ideas about frames in logic which is why the investigation in this book breaks new ground The apparent intractability of dynamic inferential reasoning is an unsolved problem in both cognitive science and logic oriented artificial intelligence By means of a logical investigation of

frames and frame concepts Andreas devises a novel logic of tractable reasoning called frame logic Moreover he devises a novel belief revision scheme which is tractable for frame logic These tractability results shed new light on our logical and cognitive means to carry out dynamic inferential reasoning Modularity remains central for tractability and so the author sets forth a logical variant of the massive modularity hypothesis in cognitive science This book conducts a sustained and detailed examination of the structure of tractable and intelligible reasoning in cognitive science and artificial intelligence Working from the perspective of formal epistemology and cognitive science Andreas uses structuralist notions from Bourbaki and Sneed to provide new foundational analyses of frames object oriented programming belief revision and truth maintenance Andreas then builds on these analyses to construct a novel logic of tractable reasoning he calls frame logic together with a novel belief revision scheme that is tractable for frame logic Put together these logical analyses and tractability results provide new understandings of dynamic and inferential reasoning Jon Doyle North Carolina State University **Subject**
