**Logic for Learning** John W. Lloyd, 2013-04-17 This book is concerned with the rich and fruitful interplay between the fields of computational logic and machine learning The intended audience is senior undergraduates graduate students and researchers in either of those fields For those in computational logic no previous knowledge of machine learning is assumed and for those in machine learning no previous knowledge of computational logic is assumed The logic used throughout the book is a higher order one Higher order logic is already heavily used in some parts of computer science for example theoretical computer science functional programming and hardware verification mainly because of its great expressive power Similar motivations apply here as well higher order functions can have other functions as arguments and this capability can be exploited to provide abstractions for knowledge representation methods for constructing predicates and a foundation for logic based computation The book should be of interest to researchers in machine learning especially those who study learning methods for structured data Machine learning applications are

becoming increasingly concerned with applications for which the individuals that are the subject of learning have complex structure Typical applications include text learning for the World Wide Web and bioinformatics Traditional methods for such applications usually involve the extraction of features to reduce the problem to one of attribute value learning **IJCAI Proceedings 1997** Martha E. Pollack, International Joint Conferences on Artificial Intelligence, 1998-07-22 Programming Languages and Systems Viktor Vafeiadis, 2025-04-30 The open access book set LNCS 15694 LNCS 15695 constitutes the proceedings of the 34th European Symposium on Programming ESOP 2025 which was held as part of the International Joint Conferences on Theory and Practice of Software ETAPS 2025 in Hamilton Canada during May 3 8 2025 The 30 full papers included in the proceedings were carefully reviewed and selected from a total of 88 submissions The proceedings also contain two short artifact reports The papers focus on aspects of programming language research such as programming paradigms and styles methods and tools to specify and reason about programs and languages programming language foundations methods and tools for implementation concurrency and distribution and applications and emerging topics

*Proceedings of the ... International Joint Conference on Artificial Intelligence*, 2001 **Computational Logic** Dov M. Gabbay, Jörg H. Siekmann, John Woods, 2014-12-09 Handbook of the History of Logic brings to the development of logic the best in modern techniques of historical and interpretative scholarship Computational logic was born in the twentieth century and evolved in close symbiosis with the advent of the first electronic computers and the growing importance of computer science informatics and artificial intelligence With more than ten thousand people working in research and development of logic and logic related methods with several dozen international conferences and several times as many workshops addressing the growing richness and diversity of the field and with the foundational role and importance these methods now assume in mathematics computer science artificial intelligence cognitive science linguistics law and many engineering fields where logic related techniques are used inter alia to state and settle correctness issues the field has diversified in ways that even the pure logicians working in the early decades of the twentieth century could have hardly anticipated Logical calculi which capture an important aspect of human thought are now amenable to investigation with mathematical rigour and computational support and fertilized the early dreams of mechanised reasoning *Calculus* The Dartmouth Conference in 1956 generally considered as the birthplace of artificial intelligence raised explicitly the hopes for the new possibilities that the advent of electronic computing machinery offered logical statements could now be executed on a machine with all the far reaching consequences that ultimately led to logic programming deduction systems for mathematics and engineering logical design and verification of computer software and hardware deductive databases and software synthesis as well as logical techniques for analysis in the field of mechanical engineering This volume covers some of the main subareas of computational logic and its applications Chapters by leading authorities in the field Provides a forum where philosophers and

scientists interact Comprehensive reference source on the history of logic     Semantics and Algebraic Specification Jens Palsberg, 2009-09-19 This Festschrift volume published to honor Peter D Mosses on the occasion of his 60th birthday includes 17 invited chapters by many of Peter's coauthors collaborators close colleagues and former students Peter D Mosses is known for his many contributions in the area of formal program semantics In particular he developed action semantics a combination of denotational operational and algebraic semantics The presentations given on a symposium in his honor in Udine Italy on September 10 2009 were on subjects related to Peter's many technical contributions and they were a tribute to his lasting impact on the field Topics addressed by the papers are action semantics security policy design colored petri nets order sorted parameterization and induction object oriented action semantics structural operational semantics model transformations the scheme programming language type checking action algebras and denotational semantics
