Basic Processes in Memory Development C.J. Brainerd, M. Pressley, 2013-11-11 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series Basic Processes of Learning, Cognition, and Motivation S. M. Cormier, 2014-04-04 First published in 1986 The main objective of this book is to provide a hard headed theoretical integration of several different major areas of research on learning cognition and motivation in humans and other mammals By hard headed the author simply means that the concepts were generated from empirical data and are testable Since an integrative theory must of necessity integrate apparent diversity such an approach involves the identification and description of the most fundamental factors structural processes underlying the observed capacities of humans and animals in the domain of learning and motivation **Handbook of Research Methods in**
