Stability and Control of Conventional and Unconventional Aerospace Vehicle Configurations Bernd Chudoba, 2019-07-23 This book introduces a stability and control methodology named AeroMech capable of sizing the primary control effectors of fixed wing subsonic to hypersonic designs of conventional and unconventional configuration layout Control power demands are harmonized with static dynamic and maneuver stability requirements while taking the six degree of freedom trim state into account The stability and control analysis solves the static and dynamic equations of motion combined with non linear vortex lattice aerodynamics for analysis The true complexity of addressing subsonic to hypersonic vehicle stability and control during the conceptual design phase is hidden in the objective to develop a generic vehicle configuration independent methodology concept The inclusion of geometrically asymmetric aircraft layouts in addition to the reasonably well known symmetric aircraft types contributes significantly to the overall technical complexity and level of abstraction The first three chapters describe the preparatory work invested along with the research strategy devised thereby placing strong emphasis on systematic and thorough knowledge utilization The engineering scientific method itself is derived throughout the second half of the book This book offers a unique aerospace vehicle configuration independent generic methodology and mathematical algorithm The approach satisfies the initial technical quest How to develop a configuration stability control methodology module for an advanced multi disciplinary aerospace vehicle design synthesis environment that permits consistent aerospace vehicle design evaluations

The Functional Interpretation of Logical Deduction Anjolina G. de Oliveira, 2012 This comprehensive book provides an adequate framework to establish various calculi of logical inference Being an OCyenrichedOCO system of natural deduction it helps to formulate logical calculi in an operational manner By uncovering a certain harmony between a functional calculus on the labels and a logical calculus on the formulas it allows mathematical foundations for systems of logic presentation designed to handle meta level features at the object level via a labelling mechanism such as the D Gabbay s Labelled Deductive Systems The book truly demonstrates that introducing OCylabelsOCO is useful to understand the proof calculus itself and also to clarify its connections with model theoretic interpretations

Logic, Language and Reasoning Hans Jürgen Ohlbach, U.

Reyle, 2012-12-06 This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995. Dov is one of the most outstanding and most productive researchers we have ever met. He has exerted a profound influence in major fields of logic, linguistics and computer science. His contributions in the areas of logic, language and reasoning are so numerous that a comprehensive survey would already fill half of this book. Instead of summarizing his work, we decided to let him speak for himself. Sitting in a car on the way to Amsterdam airport, he gave an interview to Jelle Gerbrandy and Anne Marie Mineur. This recorded conversation with him, which is included, gives a deep insight into his motivations and into his view of the world, the Almighty and, of course, the role of logic. In addition, this volume contains a partially annotated bibliography of his main papers and books. The length of the bibliography and the broadness of the topics covered there speak for itself. *Wireless and Satellite Systems* Qing Guo, Weixiao Meng, Min Jia, Xue Wang, 2022-01-21 This book constitutes the refereed post-conference proceedings of the 12th International Conference on Wireless and Satellite Services WiSATS 2021 held in Nanjing, China, in September 2020. Due to the COVID-19 pandemic, the conference was held virtually. The 79 full papers were carefully reviewed and selected from 140 submissions. The conference's central theme is the means of using the wireless and satellite services directly to the user for personal communications, multimedia and location identification. The services enabled by WiSATS not only cover the requirements of an ordinary citizen but also provide personal and public services for global coverage communications as the applications of the Internet of Things. **Formal Methods for Components and Objects** Frank S. de Boer, Marcello M. Bonsangue, Stefan Hallerstede, Michael Leuschel, 2010-11-11 All modern industries rely on large and complex software systems. In order to construct such large systems in a systematic manner, the focus of the development methodologies has switched in the last two decades from functional to structural issues. Formal methods have been applied successfully to the verification of medium-sized programs in protocol and hardware design. However, their application to the development of large systems requires a greater emphasis on specification modeling and validation techniques supporting the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages like Java. This state-of-the-art survey presents the outcome of the 8th Symposium on Formal Methods for Components and Objects held in Eindhoven, The Netherlands, in November 2009. The volume contains 17 revised contributions submitted after the symposium by speakers from each of the following European IST projects: the IST FP6 project BIONETS on biologically inspired services, evolution for the pervasive age; the IST FP7 project COMPAS on compliance-driven models, languages and architectures for services; the IST FP6 project CREDO on modelling and analysis of evolutionary structures for distributed services; the IST FP7 project DEPLOY on industrial deployment of advanced system engineering methods for high productivity and dependability; the IST FP7 project HATS on highly adaptable and trustworthy software using formal methods; the IST FP7 project INESS on integrated European railway signalling system; the IST FP7 project MOGENTES on model-based generation of tests for dependable embedded systems; the IST FP6 project PROTEST on
