Quantitative Psychological Research David Clark-Carter,2004 This thoroughly revised and updated version of David Clark Carter s catch all reference book will prove invaluable to both undergraduate and postgraduate students bringing clarity and reliability to each stage of

the quantitative research process **Inspiring the Next Young Environmental Leader** Arron Wood, Richard Wood, 2007
 Arron and Richard Wood's successful method of engaging youth on the big environmental challenges facing our planet is truly inspiring. They bring renewed hope for encouraging activism by future generations. This book is about the evolution of Kids Teaching Kids and its relevance as an effective formula for educating young people and motivating them to take action in their own lives both in and out of the classroom. Arron and Richard developed this highly effective model for Australian schools. The UN Works Programme is collaborating with them to integrate this approach into educational outreach to students around the world. **BOOK JACKET** *Futureproofing Engineering Education for Global Responsibility* Michael E. Auer, Tiia Rüütmann, 2025-03-22
 This book contains papers in the fields of Collaborative learning, Digital transition in education, AI and learning analytics in engineering education, Diversity in engineering education. The authors are currently witnessing a significant transformation in the development of education on all levels and especially in post-secondary and higher education. To face these challenges, higher education must find innovative and effective ways to respond in a proper way. Changes have been made in the way we teach and learn, including the massive use of new means of communication such as videoconferencing and other technological tools. Moreover, the current explosion of artificial intelligence tools is challenging teaching practices maintained for centuries. Scientifically based statements as well as excellent best practice examples are necessary for effective teaching and learning engineering. The 27th International Conference on Interactive Collaborative Learning (ICL2024) and 53rd Conference of International Society for Engineering Pedagogy (IGIP) which took place in Tallinn, Estonia, between 24 and 27 September 2024, was the perfect place where current trends in higher education were presented and discussed. IGIP conferences have been held since 1972 on research results and best practices in teaching and learning from the point of view of engineering pedagogy science. ICL conferences have been held since 1998, being devoted to new approaches in learning with a focus on collaborative learning in Higher Education. Nowadays, the ICL conferences are a forum for the exchange of relevant trends and research results as well as the presentation of practical experiences in learning and Engineering Pedagogy. In this way, the authors try to bridge the gap between pure scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, schoolteachers, learning industry, further and continuing education, lecturers, etc.

A Five-Year Study of the First Edition of the Core-Plus

Mathematics Curriculum Harold Schoen, Steven W. Ziebarth, Christian R. Hirsch, Allison BrckaLorenz, 2010-07-01 The study reported in this volume adds to the growing body of evaluation studies that focus on the use of NSF funded Standards based high school mathematics curricula Most previous evaluations have studied the impact of field test versions of a curriculum Since these innovative curricula were so new at the time of many of these studies students and teachers were relative novices in their use These earlier studies were mainly one year or less in duration Students in the comparison groups were typically from schools in which some classes used a Standards based curriculum and other classes used a conventional curriculum rather than using the Standards based curriculum with all students as curriculum developers intended The volume reports one of the first studies of the efficacy of Standards based mathematics curricula with all of the following characteristics The study focused on fairly stable implementations of a first edition Standards based high school mathematics

curriculum that was used by all students in each of three schools It involved students who experienced up to seven years of Standards based mathematics curricula and instruction in middle school and high school It monitored students mathematical achievement beliefs and attitudes for four years of high school and one year after graduation Prior to the study many of the teachers had one or more years of experience teaching the Standards based curriculum and or professional development focusing on how to implement the curriculum well In the study variations in levels of implementation of the curriculum are described and related to student outcomes and teacher behavior variables Item data and all unpublished testing instruments from this study are available at www.wmich.edu/cpmp for use as a baseline of instruments and data for future curriculum evaluators or Core Plus Mathematics users who may wish to compare results of new groups of students to those in the present study on common tests or surveys Taken together this volume the supplement at the CPMP Web site and the first edition Core Plus Mathematics curriculum materials samples of which are also available at the Web site serve as a fairly complete description of the nature and impact of an exemplar of first edition NSF funded Standards based high school mathematics curricula as it existed and was implemented with all students in three schools around the turn of the 21st century

Quantitative Psychological Research: The Complete Student's Companion,, 3rd Edition David Clark-Carter, 2009-09-16 This book expertly guides the reader through all stages involved in undertaking quantitative psychological research from accessing the relevant literature through designing and conducting a study analysing and interpreting data and finally reporting the research This third edition includes two new chapters on preliminary checking of data and allowing for additional variables when comparing the means of different conditions and expands on original topics such as choosing sample sizes and how to test for mediation effects It also contains increased coverage of tests and further detail of techniques and terms which psychologists will meet when working with those in the medical professions As the chapters focus on choosing appropriate statistical tests and how to interpret and report them rather than the detailed calculations which appear in appendices the reader is able to gain an understanding of a test without being interrupted by the need to understand the complex mathematics behind it In addition for the first time the book is accompanied by an online bank of multiple choice questions The book helps readers to Locate reports of relevant existing research Design research while adhering to ethical principles Identify various methods which can be used to ask questions or observe behaviour Choose appropriate samples Display and analyse findings numerically and graphically to test hypotheses Report psychological research in a variety of ways As such the book is suitable for psychology students and professionals at all levels and is particularly useful to those working in Health and Clinical Psychology
