The conference was held in Paris France on November 19-21 2003. The event was the sixth meeting of this conference series which is held roughly every year and a half the earlier events having been held in Paris Canterbury Florence Stanford and Twente. The goal of the FMOODS series of conferences is to bring together researchers whose work encompasses three important and related fields: formal methods, distributed systems, object based technology. Such a convergence is representative of recent advances in the field of distributed systems and provides links between several scientific and technological communities as represented by the conferences FORTE PSTV CONCUR and ECOOP. The objective of FMOODS is to provide an integrated forum for the presentation of research in the above mentioned fields and the exchange of ideas and experiences in the topics concerned with the formal methods support for open object based distributed systems. For the call for papers aspects of interest of the considered systems included but were not limited to formal models formal techniques for specification design or analysis component based design verification testing and validation semantics of programming coordination or modeling languages type systems for programming coordination or modelling languages behavioral typing multiple viewpoint modelling and consistency between different models transformations of models integration of quality of service requirements into formal models formal models for security and applications and experience carefully described. *Formal Methods for Open Object-Based Distributed Systems IV* Scott F. Formal Methods for Distributed Processing Howard Bowman, John Derrick, 2001-10-22 Originally published in 2002 this book presents techniques in the application of formal methods to object based distributed systems A major theme of the book is how to formally handle the requirements arising from OO distributed systems such as dynamic reconfiguration encapsulation subtyping inheritance and real time aspects These may be supported either by enhancing existing notations such as UML LOTOS SDL and Z or by defining fresh notations such as Actors Pi calculus and Ambients The major specification notations and modelling techniques are introduced and compared by leading researchers The book also includes a description of approaches to the specification of non functional requirements and a discussion of security issues Researchers and practitioners in software design object oriented computing distributed systems and telecommunications systems will gain an appreciation of the relationships between the major areas of concerns and learn how the use of object oriented based formal methods provides workable solutions

Formal Methods for Components and Objects Frank S. de Boer, Marcello M. Bonsangue, Susanne Graf, Willem-Paul de Roever, 2004-11-08 Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design However their application to more complex systems resulting from the object oriented and the more recent component based software engineering paradigms requires further development of specification and verification techniques supporting the concepts of reusability and modifiability This book presents revised tutorial lectures given by invited speakers at the Second International Symposium on Formal Methods for Components and Objects FMCO 2003 held in Leiden The Netherlands in November 2003 The 17 revised lectures by leading researchers present a comprehensive account of the potential of formal methods applied to large and complex software systems such as component based systems and object systems The book makes a unique contribution to bridging the gap between theory and practice in software engineering
