Pollicini,2012-12-06 I am very pleased to write these few brief paragraphs introducing this book and would like to take this opportunity to attempt to set the Toolpack project in an appropriate historical context The Toolpack project must be considered to have actually began in the Fall of 1978 when Prof Webb C Miller at a meeting at Jet Propulsion Laboratories in Pasadena California suggested that there be a large scale project called Toolpack aimed at pulling together a comprehensive collection of mathematical software development tools It was suggested that the project follow the pattern of other Pack projects such as Eispack Linpack and Funpack which had assembled and systematized comprehensive collections of mathematical software in such areas as eigenvalue computation linear equation solution and special function approximation From the that the Toolpack project would differ significantly from beginning it was recognized these earlier Pack projects in that it was attempting to assemble and systematize software in an area which was not well established and understood Thus

it was not clear how to organize and integrate the tools we were to collect into Toolpack As a consequence Toolpack became simultaneously a research project and a development project The research was aimed at determining effective strategies for large scale integration of large scale software tools and the development project was aimed at implementing these strategies and using them to put high quality tools at the disposal of working mathematical software writers *Electronic Design*, 1984 *Modern Software Tools for Scientific Computing* A. Bruaset, E. Arge, Hans Petter Langtangen, 2012-12-06 Looking back at the years that have passed since the realization of the very first electronic multi purpose computers one observes a tremendous growth in hardware and software performance Today researchers and engineers have access to computing power and software that can solve numerical problems which are not fully understood in terms of existing mathematical theory Thus computational sciences must in many respects be viewed as experimental disciplines As a consequence there is a demand for high quality flexible software that allows and even encourages experimentation with alternative numerical strategies and mathematical models Extensibility is then a key issue the software must provide an efficient environment for incorporation of new methods and models that will be required in future problem scenarios The development of such kind of flexible software is a challenging and expensive task One way to achieve these goals is to invest much work in the design and implementation of generic software tools which can be used in a wide range of application fields In order to provide a forum where researchers could present and discuss their contributions to the described development an International Workshop on Modern Software Tools for Scientific Computing was arranged in Oslo Norway September 16-18 1996 This workshop informally referred to as Sci Tools 96 was a collaboration between SINTEF Applied Mathematics and the Departments of Informatics and Mathematics at the University of Oslo

Programming Environments for Massively Parallel Distributed Systems Karsten M. Decker,Rene M. Rehmman,2013-04-17 Massively Parallel Systems MPSs with their scalable computation and storage space promises are becoming increasingly important for high performance computing The growing acceptance of MPSs in academia is clearly apparent However in industrial companies their usage remains low The programming of MPSs is still the big obstacle and solving this software problem is sometimes referred to as one of the most challenging tasks of the 1990 s The 1994 working conference on Programming Environments for Massively Parallel Systems was the latest event of the working group WG 10 3 of the International Federation for Information Processing IFIP in this field It succeeded the 1992 conference in Edinburgh on Programming Environments for Parallel Computing The research and development work discussed at the conference addresses the entire spectrum of software problems including virtual machines which are less cumbersome to program more convenient programming models advanced programming languages and especially more sophisticated programming tools but also algorithms and applications
