Foundations Of Business Information Systems:

Information Systems Steven Alter, 2002 *THE REALITY BEHIND SYSTEM SUCCESS* Steven Alter's *Information Systems Foundation of E Business* fourth edition emphasizes the essential role information systems play in today's successful businesses. Viewing information systems from a business perspective is essential for understanding how e-commerce and e-business really work and for appreciating why technology is not a magic bullet that solves all problems. Most current business practices rely on IT but successful application of any technology involves much more than the technology itself. Today's managers need a way to understand and evaluate the impact and use of technology in their businesses. This book is an indispensable tool for business and IT students because it provides a rigorous yet non-technical approach that any manager, executive, or business professional can use to visualize and analyze system-related opportunities and problems that confront almost every company in today's economy. It presents a practical, straightforward approach for attaining business results, recognizing possibilities, and avoiding the wasted time and effort consumed by technology initiatives that never achieve their goals. It combines the vocabulary of today's technologies with problem-solving tools and methods that business and IT students can continue to use in the future. This text's updated coverage of the work system framework and principles of e-business and e-commerce, value and supply chains, ERP systems, networks, and system security help explain how technology applications make a difference. Its companion web site www.prenhall.com/alter extends the book's coverage. The balance of theory and practice in this text makes *Information Systems Foundation of E Business* fourth edition a resource that business and IT students can use even after new generations of technology have replaced those of today.

[Foundations of Business Information Systems](#) Andrew Doswell, 2013-03-12 A few years ago there were no books on information technology and business; now there are a great many. To add to that flow calls for courage and judgment on the part of both a potential author and publisher. Andrew Doswell and Plenum Press are justified in bringing this work into the market. The main reason is that Andrew Doswell has brought to the work some simple yet formidable attributes. The first of these is that he knows what he is talking about. He was trained as an electrical engineer; he then was employed in business drawing on and fortifying that training where he moved into an administrative position. Later still he moved into teaching, first in Ireland then in Scotland, but while employed in education he has not become an academic recluse. On the contrary, he has continued to maintain his links with business, doing so by engaging in both research and consultancy. Within the University, he has been at the forefront of our thrust into office automation and office information systems.
