Hybrid Methods In Pattern Recognition Methods:

Hybrid Methods in Pattern Recognition Horst Bunke, Abraham Kandel, 2002 The field of pattern recognition has seen enormous progress since its beginnings almost 50 years ago A large number of different approaches have been proposed Hybrid methods aim at combining the advantages of different paradigms within a single system Hybrid Methods in Pattern Recognition is a collection of articles describing recent progress in this emerging field It covers topics such as the combination of neural nets with fuzzy systems or hidden Markov models neural networks for the processing of symbolic data structures hybrid methods in data mining the combination of symbolic and subsymbolic learning and so on Also included is recent work on multiple classifier systems Furthermore the book deals with applications in on line and off line handwriting recognition remotely sensed image interpretation fingerprint identification and automatic text categorization

Pattern Recognition Theory and Applications Pierre A. Devijver, Josef Kittler, 2012-12-06 This book is the outcome of a NATO Advanced Study Institute on Pattern Recognition Theory and Applications held in Spa Balmoral Belgium in June 1986 This Institute was the third of a series which started in 1975 in Bandol France at the initiative of Professors K S Fu and A Whinston and continued in 1981 in Oxford UK with Professors K S Fu J Kittler and L F Pau as directors As early as in 1981 plans were made to pursue the series in about 1986 and possibly in Belgium with Professor K S Fu and the present editors as directors Unfortunately the sort en decida autrement Professor Fu passed away in the spring of 1985 His sudden death was an irreparable loss to the scientific community and to all those who knew him as an inspiring colleague a teacher or a dear friend Soon after Josef Kittler and I decided to pay a small tribute to his memory by helping some of his plans to materialize With the support of the NATO Scientific Affairs Division the Institute became a reality It was therefore but natural that the proceedings of the Institute be dedicated to him The book contains most of the papers that were presented at the Institute Papers are grouped along major themes which hopefully represent the major areas of contemporary research These are 1 Statistical methods and clustering techniques 2 Probabilistic relaxation techniques 3 From Markovian to connectionist models 4

Syntactic and Structural Pattern Recognition Horst Bunke, Alberto Sanfeliu, 1990 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we

believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book **Handbook of Pattern Recognition and Computer Vision** C. H.

Chen,L. F. Pau,P. S. Wang,1993-08 The book provides an up to date and authoritative treatment of pattern recognition and computer vision with chapters written by leaders in the field On the basic methods in pattern recognition and computer vision topics range from statistical pattern recognition to array grammars to projective geometry to skeletonization and shape and texture measures BOOK JACKET **Computer Vision and Image Processing: Methods and Applications** Dr.
