Hydrolysis Rate Program:

Hydrolysis Rate Program Philip H. Howard, William M. Meylan, 1992-06-26 Now you can calculate hydrolysis rates for chemicals without experimental data using the Hydrolysis Rate Program This powerful software package calculates the hydrolysis rate constant for esters carbamates halomethanes alkyl halides and epoxides using the method developed by the U S Environmental Protection Agency s EPA Office of Toxic Substances The program uses SMILES notation structural input to calculate a second order acid or base catalyzed hydrolysis rate constant at 25 C Acid and base catalyzed half lives are calculated for pH7 and or pH8 Hydrolysis Rate Program will run on any IBM or IBM compatible personal computer with 320K RAM and will be a valuable asset for any environmental chemist analytical lab regulator or chemical company

Research Program Forest Products Laboratory (U.S.), 1948 *Forest Products Laboratory Research Program* Forest Products Laboratory (U.S.), 1950 **Substitute Chemical Program** United States. Environmental Protection Agency. Office of Pesticide Programs. Criteria and Evaluation Division, 1975 *Transformation Products of Synthetic Chemicals in the Environment* Alistair Boxall, 2009-09-01 When a synthetic chemical is released into the environment it may be degraded by abiotic and biotic processes These degradation processes usually involve a cascade of reactions resulting in the formation of a number of transformation products While we usually know a great deal about the environmental properties fate and effects of parent synthetic chemicals our understanding of the impacts of transformation products is much less developed As such this volume brings together chapters from leading researchers in the field of transformation products in the environment and describes how these products are formed how they move through the environment and their environmental effects The book also presents modelling and analytical approaches for understanding the occurrence fate and effects of transformation products in the environment It is of interest to scientists in academia the chemicals industry and regulators as well as graduate students in Environmental Chemistry and Ecotoxicology [Analysis of Engineering Design Studies for Demilitarization of Assembled Chemical Weapons at Pueblo Chemical Depot](#) National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons: Phase II, 2001-09-27 The Program Manager for Assembled Chemical Weapons Assessment PMACWA of the Department of Defense DOD requested the National Research Council NRC to assess the engineering design studies EDSs developed by Parsons Honeywell and General Atomics for a chemical demilitarization facility to completely dispose of the assembled chemical weapons at the Pueblo Chemical Depot in Pueblo Colorado To accomplish the task the NRC formed the Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons Phase II ACW II Committee This report presents the results of the committee s scientific and technical assessment which will assist the Office of the Secretary of Defense in selecting the technology package for destroying the chemical munitions at Pueblo The committee evaluated the engineering

design packages proposed by the technology providers and the associated experimental studies that were performed to validate unproven unit operations A significant part of the testing program involved expanding the technology base for the hydrolysis of energetic materials associated with assembled weapons This process was a concern expressed by the Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons ACW I Committee in its original report in 1999 NRC 1999 The present study took place as the experimental studies were in progress In some cases tests for some of the supporting unit operations were not completed in time for the committee to incorporate results into its evaluation In those cases the committee identified and discussed potential problem areas in these operations Based on its expertise and its aggressive data gathering activities the committee was able to conduct a comprehensive review of the test data that had been completed for the overall system design This report summarizes the study

Environmental Health Perspectives ,2003-07 Bacterial Circadian Programs Jayna L. Ditty, Shannon R. Mackey, Carl H. Johnson, 2009-02-01 Since the discovery of circadian rhythms in cyanobacteria in the late 1980s the field has exploded with new information The cyanobacterial model system for studying circadian rhythms *Synechococcus elongatus* has allowed a detailed genetic dissection of the bacterial clock due to the methods currently available in molecular structural and evolutionary biology This book addresses multiple aspects of bacterial circadian programs the history and background of the cyanobacteria and circadian rhythms in microorganisms the molecular basis structure and evolution of the circadian clock entrainment of the oscillator with the environment and the control of downstream processes by the clock the demonstration of adaptive significance and the prokaryotic clock s remarkable stability and mathematical and synthetic oscillator models for clock function Experts in the field provide a timely and comprehensive review and a stepping stone for future work on this amazing group of microorganisms and timing

Soil/Sediment Adsorption Constant Program Philip H. Howard, William M. Meylan, 1992-06-26 Soil Sediment Adsorption Constant Program uses the SMILES notation structural input to calculate the soil or sediment adsorption coefficient K_{oc} from a correlation of the molecular connectivity indices and correction factors for certain chemical classes This method was developed by the U S Environmental Protection Agency s EPA Office of Toxic Substances and is now available for use on any IBM or IBM compatible computer with 240K RAM This powerful user friendly program provides reliable data that will benefit any environmental chemist or regulator chemical companies and analytical labs

Chemical Property Estimation Edward Baum, 2018-05-11 Our world is widely contaminated with damaging chemicals and companies create thousands of new potentially dangerous chemicals each year Due to the difficulty and expense of obtaining accurate measurements and the unreliability of reported values we know surprisingly little about the properties of these contaminants Determining the properties of chemicals is critical to judging their impact on environmental quality and in making decisions about emission rates clean up and other important public health issues Chemical Property Estimation describes modern methods of estimating chemical properties methods which cost much less

than traditional laboratory techniques and are sufficiently accurate for most environmental applications. Estimation methods are used to screen chemicals for testing design monitoring and analysis methods design clean up procedures and verify experimental measurements. The book discusses key methods for estimating chemical properties and considers their relative strengths and weaknesses. Several chapters are devoted to the partitioning of chemicals between air water soil and biota and properties such as solubility vapor pressure and chemical transport. Each chapter begins with a review of relevant theory and background information explaining the applications and limitations of each method. Sample calculations and practical advice on how and when to use each method are included as well. Each method is evaluated for accuracy and reliability. Computer software databases and internet resources are evaluated as well as other supplementary material such as fundamental constants units of measure and more.
