working in Condensed Matter Physics Chemistry and Materials Science **Recent Developments of Soil Mechanics and Geotechnics in Theory and Practice** Torsten Wichtmann, Jan Machaček, Merita Tafili, 2024-10-18 This book provides essential insights into recent developments in fundamental geotechnical engineering research. Special emphasis is given to a new family of constitutive soil description methods which take into account the recent loading history and the dilatancy effects. Particular attention is also paid to the numerical implementation of multi phase material under dynamic loads and to geotechnical installation processes. In turn the book addresses implementation problems concerning large deformations in soils during piling operations or densification processes and discusses the limitations of the respective methods. Numerical simulations of dynamic consolidation processes are presented in slope stability analysis under seismic excitation. Lastly achieving the energy transition from conventional to renewable sources will call for geotechnical expertise. Consequently the book explores and analyzes a selection of interesting problems involving the stability and serviceability of supporting structures and provides new solutions approaches for practitioners and scientists in geotechnical engineering. The content reflects the outcomes of the Colloquium on Geotechnical Engineering 2024 Geotechnik Kolloquium held in Bochum Germany in March 2024 **CFD Applications in Nuclear Engineering** Wenxi Tian, Victor Petrov, Yixiang Liao, Mingjun Wang, Nejdet Erkan, 2023-08-21 High fidelity nuclear reactor thermal hydraulic simulations are a hot research topic in the development of nuclear engineering technology. The three dimensional Computational Fluid Dynamics CFD and Computational Multi phase Fluid Dynamics CMFD methods have attracted significant attention in predicting single phase and multi phase flows under steady state or transient scenarios in the field of nuclear reactor engineering. Compared with three dimensional thermal hydraulic methods the traditional one dimensional system analysis method contains inherent defects in the required accuracy and spatial resolution for a number of important nuclear reactor thermal hydraulic phenomena. At present the CFD method has been widely adopted in the nuclear industry across both light water reactors and liquid metal cooled fast reactors providing an effective solution for complex issues of thermal hydraulic analysis. However the CFD method employs empirical models for turbulence simulation heat transfer multi phase interaction and chemical reactions. Such models must be validated before they can be used with confidence in nuclear reactor applications. In addition user practice guidelines play a critical role in achieving reliable results from CFD simulations **Hydrodynamics of High-Speed Marine Vehicles** Odd M. Faltinsen, 2006-01-09 Hydrodynamics of High Speed Marine Vehicles first published in 2006 discusses the three main categories of high speed marine vehicles: vessels supported by submerged hulls, air cushions or foils. The wave environment, resistance, propulsion, seakeeping, sea loads and manoeuvring are extensively covered based on rational and simplified methods.
