Intelligent Vision Systems for Industry Bruce G. Batchelor, Paul F. Whelan, 2012-12-06 The application of intelligent imaging techniques to industrial vision problems is an evolving aspect of current machine vision research Machine vision is a relatively new technology more concerned with systems engineering than with computer science and with much to offer the manufacturing industry in terms of improving efficiency safety and product quality Beginning with an introductory chapter on the basic concepts the authors develop these ideas to describe intelligent imaging techniques for use in a new generation of industrial imaging systems Sections cover the application of AI languages such as Prolog the use of multi media interfaces and multi processor systems external device control and colour recognition The text concludes with a discussion of several case studies that illustrate how intelligent machine vision techniques can be used in industrial applications

Multimedia/Hypermedia in Open Distributed Environments Wolfgang Herzner, Frank Kappe, 2012-12-06 Over the last few years multimedia hardware and applications have become widely available in the personal computer and workstation environments and multimedia is rapidly becoming an integral part of stand alone single user systems In contrast the problems encountered when moving to open distributed environments are only just beginning to be identified Examples are the transmission of dynamic data video sound over large distances and cooperative work Following on from two successful workshops on multimedia EG MM 94 concentrates on topics related to multimedia hypermedia in open distributed environments The goal of this symposium was not only to give a comprehensive overview of the current state of research development and standardisation in the field but also to provide an opportunity for live demonstrations to experience directly the presented results The symposium program consists of two invited keynote speeches eight technical sessions one tutorial and one demonstration session A workshop following immediately after the symposium provides an opportunity for in depth discussions of open problems among experts It is intended to fill a gap often experienced at larger meetings and conferences the lack of time to discuss in detail issues raised during the event such as the characteristics of different approaches to a certain problem It is intended that the results of the workshop be published as a Eurographics Technical Report **The**

artificial intelligence *Internet Links for Science Education* Karen C. Cohen, 2012-12-06 Science teachers come in many varieties but they share a common goal to nurture learners Over the past decade we have learned a great deal about how to do this effectively Of all this new and some not so new knowledge what strikes me as most important is that learning occurs best within a context Still as obvious as that may seem it is relatively rare in our high school science classrooms The problem of course is that it is not easy to create a learning experience with hands on relevance to the science under discussion Science teachers in addition to not having the time for the most part do not have the expertise or readily available resources The solution lies in finding ways to bring scientists into the teaching learning equation Scientists teamed with teachers and their students represent a very real and rich opportunity to involve students in real science as practiced Imagine a research book that gives examples of honest science research experiences for science oriented students What's more imagine a book that includes examples where students are collaborating with scientists from all over the world on research projects in person or via the Internet *Internet Links for Science Education* does just that It explores the role of the Internet and technology in working student scientist partnerships *Elements of Hypermedia Design: Techniques for Navigation & Visualization in Cyberspace* Peter Gloor, 2013-11-11 The hypermedia authoring process has been vividly described in a special issue of the *Economist* as a combination of writing a book a play a film and a radio or television show A hypermedia document combines all these elements and adds some of its own The author's first job is to structure and explain all of the information The author then must distill the information into brief descriptive nodes Each node has to contain a list of the ingredients and instructions on how the ingredients are mixed together to the greatest advantage The structure of the material provided is translated into an architectural metaphor of some kind much of the designer's work is the creation of this imaginary space Then the designers must chart the details of what to animate what to film who to interview and how to arrange the information in the space to be built Eco95a This book presents guidelines tools and techniques for prospective authors such that they can design better hypermedia documents and applications It surveys the different techniques used to organize search and structure information in a large information system It then describes the algorithms used to locate reorganize and link data to enable navigation and retrieval It looks in detail at the creation and presentation of certain types of visual information namely algorithm animations It introduces new mechanisms for editing audio and video data streams
