Lefty the Loggerhead Turtle Hale W. Bremer, 2004-09 Go Lefty Go Lefty Lee County Florida students chant as they participate in a story play of the children's book Lefty the Loggerhead Turtle They have witnessed Lefty's life from a small hatchling seeking the moonlight to a mature turtle forced to cope with the loss of a front flipper What is it the physically challenged Canadian suggests as a solution that has many shaking their heads in disbelief Can a prosthesis yes a prosthesis return the crippled sea turtle to the life he once knew Sounds incredible but adults will join their children and cheer Everyone wishes the loveable sea creature will meet his own life's challenges and return to his ocean paradise at Bahia Honda State Park in the Florida Keys This compelling children's book will easily become the hands on favorite for those who know a winner and cheer for his success

The Very Terrified Turtle Mark Edward Green, 2019-12-02 This book begins a long time ago when humans discovered that through coal and natural gas we could produce heat light and steam We were able to utilise these products to power trains and generate electricity ultimately creating the world you and I live in today As we currently stand human activities have an extremely negative impact on this beautiful planet of ours and we have only one I started to write this book the day that I saw an online video of a mother sea turtle trying to lay her eggs in the sand dune The sand dune was only half sand the other half was plastic and mixed debris washed ashore with the tides The tides move things around She laid her eggs and the next scene was the babies struggling to hatch out amongst the plastic When I first viewed this video I wrongly assumed that this was a scene from somewhere else in the world other than Australia I found out later that the video was taken by a Japanese biologist working on Christmas Island This is a remote Australian territory island off the northwest coast of Western Australia which has huge deposits of plastic thanks to certain ocean currents The devastation I felt watching this video inspired me to start writing this book The next day I saw an internet article about the turtles of Raine Island situated in the northern part of the Barrier Reef The article stated that a survey had revealed that the vast majority of animals in this area were hatching out as females The sex of sea turtles is determined by incubation temperature of the eggs The incubation temperature is determined by the depth that the mother will lay her eggs in the sand If conditions are normal then half will be male the other half female Temperatures in the sand dunes of Raine Island are producing mostly females and this is a very bad situation as imbalance between the sexes can lead to population decline amongst other problems So this story is driven by the need for environmental change and the urgency with which young people need to step up and demand major resource management changes
