The Highway Engineer's Guide to Alternative Energy Sources and Applications Marian F. Eilers, John Laughland, 1980 A highway engineer considering an alternative energy source for an upcoming project probably does not have a background in heating ventilation and air conditioning or electrical engineering but with overall responsibility for the project needs to determine quickly whether or not an alternative energy source is cost effective If it is cost effective he would then need to know the design process and terminology to supervise the designer's work The guide meets these needs and in addition offers a selected bibliography of published information a listing of persons with experience in this area and a selection of actual case studies of highway agencies that have used alternative energy sources successfully

**Using Biomass as an Energy Source in Homes** Allana Katiussya Silva Pereira, Ananias Francisco Dias Júnior, 2023-08-17

The book deepens understanding of biomass sources and technologies used for cooking worldwide It contributes directly to the creation of policies aimed at the mitigation of climate change Historically wood is considered humanity's first source of energy Even after decades of use and industrialization processes it is still considered the most important single source of renewable energy About a third of the world's population is energetically dependent on wood for cooking and or heating Recently the Covid 19 pandemic made it impossible to purchase fuels such as liquefied petroleum gas LPG forcing families in financial difficulties to opt for cheaper and more accessible sources of energy such as wood and vegetable coal This has been the picture of many families around the world and negatively impacts the environment and energy security Considering that there are still many wood residues that are wasted and that tropical forests need to be conserved knowledge about the energy use of wood residues is also essential This is even more relevant when considering the significant volume of biomass coming from the sustainable management of the largest tropical forest in the world the Amazon Forest The book considers

which wood variables should be taken into account when thinking about energy generation how do food cooking technologies contribute to potentiating pollutants emissions and how can these harmful effects be mitigated It describes the chemical composition of biomass and the chemical compounds released during its burning as well as their impacts on the environment and human health It also presents the influence that technologies used in food cooking have on pollutant emissions and which alternatives can be used such as the use of solar energy
